

Title: Individual Academic Report (Component 1)

Module Name: Academic Skills

Module Code: LCBB4006

Student Name: Angelo Dimo

Student Number: 2246213

Lecturer Name: Yousuf Kamal

In the report below, the importance of Research and Referencing skills will be developed. Both are part of Academic skills. Students acquire the opportunity to learn writing and reading in an academic level. Research accompanies the referencing as you begin from the capacity to search appropriate sources for a subject to the knowledge to give credits to authors who create the book, the journal article, the report etc. Nowadays, the ability of these skills is a basic requirement to build your career. At the end of this assessment, a reference paragraph by myself about the subject at this time will be written with the avoidance of plagiarism obvious.

Academic skills include more than one part. An overall discussion will be introduced by myself (how I understand the module). There are plenty different academic skills required for my learning. As for a better explanation, I will mention straight away some of them. First, writing and reading are the legit of the own phrase (Academic skills). Secondly, communication is pretty much the most popular from my personal opinion because all students need to communicate with classmates, teachers, students' services, management to find answers to their queries. In addition, time management is the key of succeed. Students are called to organise their routine so they can have time for everything they want to achieve. Furthermore, the using of a laptop is a –must for learning. These were some examples that can give you a side of my module.

Research skills refer the capability to explore the suitable sources for what you are asked for. Critical thinking skills, as a start, are quite effective for presentations and assessments due to students need to pay attention to the details, be able to highlight the correct notes. Moreover, when you have a problem (query), you can easily solve it when forage in a source. Also, by researching, students can make their own CV for future jobs. After those, it is time to demonstrate the importance of them skills. At the university you study so you can own a degree after your graduation. Later on, you find a workplace. Now, I finally brought you at my point. In a workplace, you have to be able to identify the problems, to come up with a variety of solutions. You will be asked as well to provide your resources, your ideas (where they come from).
