EC

Dear Adam, Carly, Chrissie, Kate, Katherine, Gab, Mark (year 2)

I'm so sorry for overrunning on yesterday's BMDS7010 session, it was a casualty of us trying to bring forward the presentations (at least we did not delaying them till April).

To ensure completeness, I have done a screen capture video this morning of the final "SPSS walkthrough" slides which walked through a couple more points as we will be seeing some of them in the self-studies.

The video is at <https://youtu.be/sVZXi7hP0jM> I'll also post this note on Moodle as a pdf for a reminder.

Next Thursday 5th March I will upload on Moodle a document on what to expect from the BMDS7010 self-studies (Gab asked about this).

I should let you know that also on the 5th March I have a second operation on my bladder cancer from my first on 20 Nov. On reassessment I've been recalled for a further resection op plus localised chemotherapy. I may be out for a while so I will try and record my segment on LLMs, machine learning and data modelling to keep our continuity on BMDS7010. Simona, Philip and I are discussing how we will manage it.

===

As a parting shot, the last two slides in the walkthrough had some links on "statistical diversions" - part of our objectives are seeing how the media can carry much misinformation through statistics. I'd linked a video that illustrated this very well. Unfortunately YouTube has blocked it for copyright reasons, however it has valid educational content (through comedy) so take a look - it's attached to this email (made much smaller than the original).

Best wishes

Ed
