

Showcasing your digital badges is a great way to demonstrate your accomplishments and highlight your skills and special professional achievements to your contacts.

You can add your Moodle digital badge to your LinkedIn profile by following a few simple steps:

How to get the badge info from Moodle

Login to Moodle and go to your own profile by selecting it from the personal menu. In your profile dashboard you will see all the badges you have earned. Select the badge you want to export and click on its name under the image.

This will take you to the badge details page. This shows the metadata that anyone clicking on your badge, e.g., at LinkedIn, will see. It includes confirmation of the badge issuer (UWTSd) plus a Description and information about the criteria you met to gain the badge. From the top of the browser window, copy the long URL, which looks similar to:

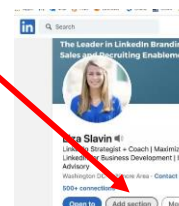

<https://moodle.uwtsd.ac.uk/badges/badge.php?hash.>

If you right-click on the URL, it will all be selected and you can copy it to your clipboard. You can also click Download to save a copy of the image of the badge.

How to add a Moodle badge to LinkedIn

Log into your LinkedIn profile. On the top menu bar, under the Me tab (usually under your profile pic:) click on the down arrow, and then View profile Click **Add profile section** and in the drop down select the **Recommended** menu and click **Add license and certifications.**

In each of the boxes copy the relevant information from the Badge page in Moodle.

Name of the badge (from the badge page, Badge details section)

Certification authority: Start typing University of Wales and then select it when shown in the box.

Issue date: add month and year (from the badge page Badge expiry section)

If there is no expiration date (usual) check that "This credential does not expire" is clicked

Scroll down (you can miss the ID field) and in "Credential URL" paste the badge URL you copied earlier in step above.

Now Save button to add the information to your LinkedIn profile.

You've completed the process. Your open digital badge from the University should now be displayed in your LinkedIn profile.
