

Video Transcript: Block 2 Task - Instructions

The task for Block 2 is about identifying the activities in your setting that support sensory integration.

- Spend 20 minutes watching the children in your settings.
- Use the voice recorder on your phone or iPad to describe three activities that are developing sensory integration.
- Describe these for no more than a minute and upload them. We would like you to upload these onto a OneDrive folder.

How to download OneDrive

So, I'm going to show you how to download OneDrive onto your phone or iPad.

First, go into your app store, then search for OneDrive. Then click Microsoft One drive. And this will download. Then go straight on to the app once it's downloaded and it will ask you to sign in.

Use your university email log in details.

How to upload your voice recording to OneDrive

Use the voice notes or voice recorder app to record your ideas. Then once you've recorded your audio on your voice note app, you can then label it and then click share, and click OneDrive. So, this is if you've downloaded the OneDrive app on your phone or your iPad and it will come up with your student email address because you would have set up your OneDrive with that address. And then that's how you save it, straight to the OneDrive.

How to share your voice recording with your tutor

Now go to the OneDrive app on your phone or iPad and you'll see that the voice note you just recorded has sent to that folder. And I've created a folder called Level Three blog. You could do something similar.

Then you can share that file or share the whole folder with the three little dots under sharing.

And if you click that, it comes up with an email address to put in. So then share that folder with your tutor. So, type in their email address and you can write a little message to say what it includes.

So that is how you would save and send your voice note to your tutor.
