

Basic digital safety

links

Many people send many links to get all your details. It is important that you do not open any suspicious links.

Not sharing

Do not share your password with anybody except if it is needed. Your device contains personal information about you. It is essential that you do not share it with everyone.

Strong password

It is important that you create a strong password which nobody could have access to. Your device contains important information, therefore it is essential to protect it.

Safe browsing

Sometimes we can open a browser that could contain fake ads and fake files. It is important that we have a safe browsing so any time that we want to find something at the internet, we know that it is a safe website.

Downloads

You should make sure that the files that you are downloading are not fake because those files can contain viruses and malware, which means your personal information can be stolen.

post

You need to be careful of what you post, personal pictures, personal details. People are waiting to find personal information to use it against you, and use your personal information.

antivirus

Antivirus software detects any suspicious files that are about to attack your device and can warn you, so you take actions to prevent that the virus gets into your device.

Back ups

You can lose your device at any time or get damaged. It is why it is important that you often do back up in case of these scenarios so you can get your information back.

Safe internet

Sometimes we have our devices that could be connected to the nearest internet available, which gets your IP, which they can know your locations, and they can know specific details about your device.

Verification in two steps

Verification in two steps means to set up more security to your device. It is another way to have access to your device or your stolen device and you could get your details back in case you forgot your password, or someone got access to it.
