

ALL EDUCATIONAL voice operated apps that work using Google Assistant at 14/10/2017

John Dingley 14/10/2017

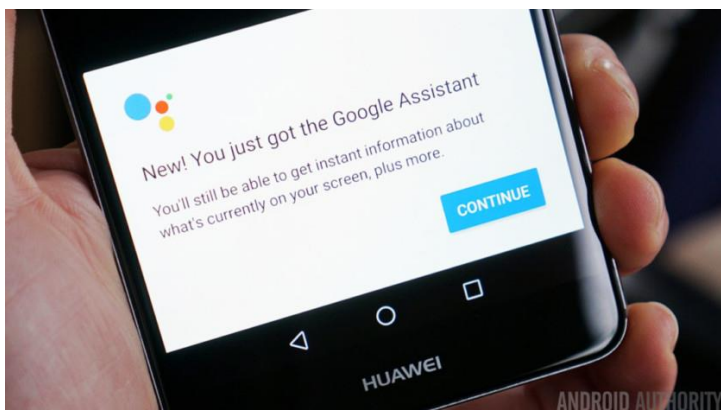

Google Assistant is a completely voice interactive system that runs on the Google Home devices (a bit like Amazon Alexa) but also Android phones, including all the popular ones such as Samsung etc. As you can see, the list of apps of this type, that work with this voice system, is tiny compared to “regular” apps of which there now are probably literally millions.

Google Home

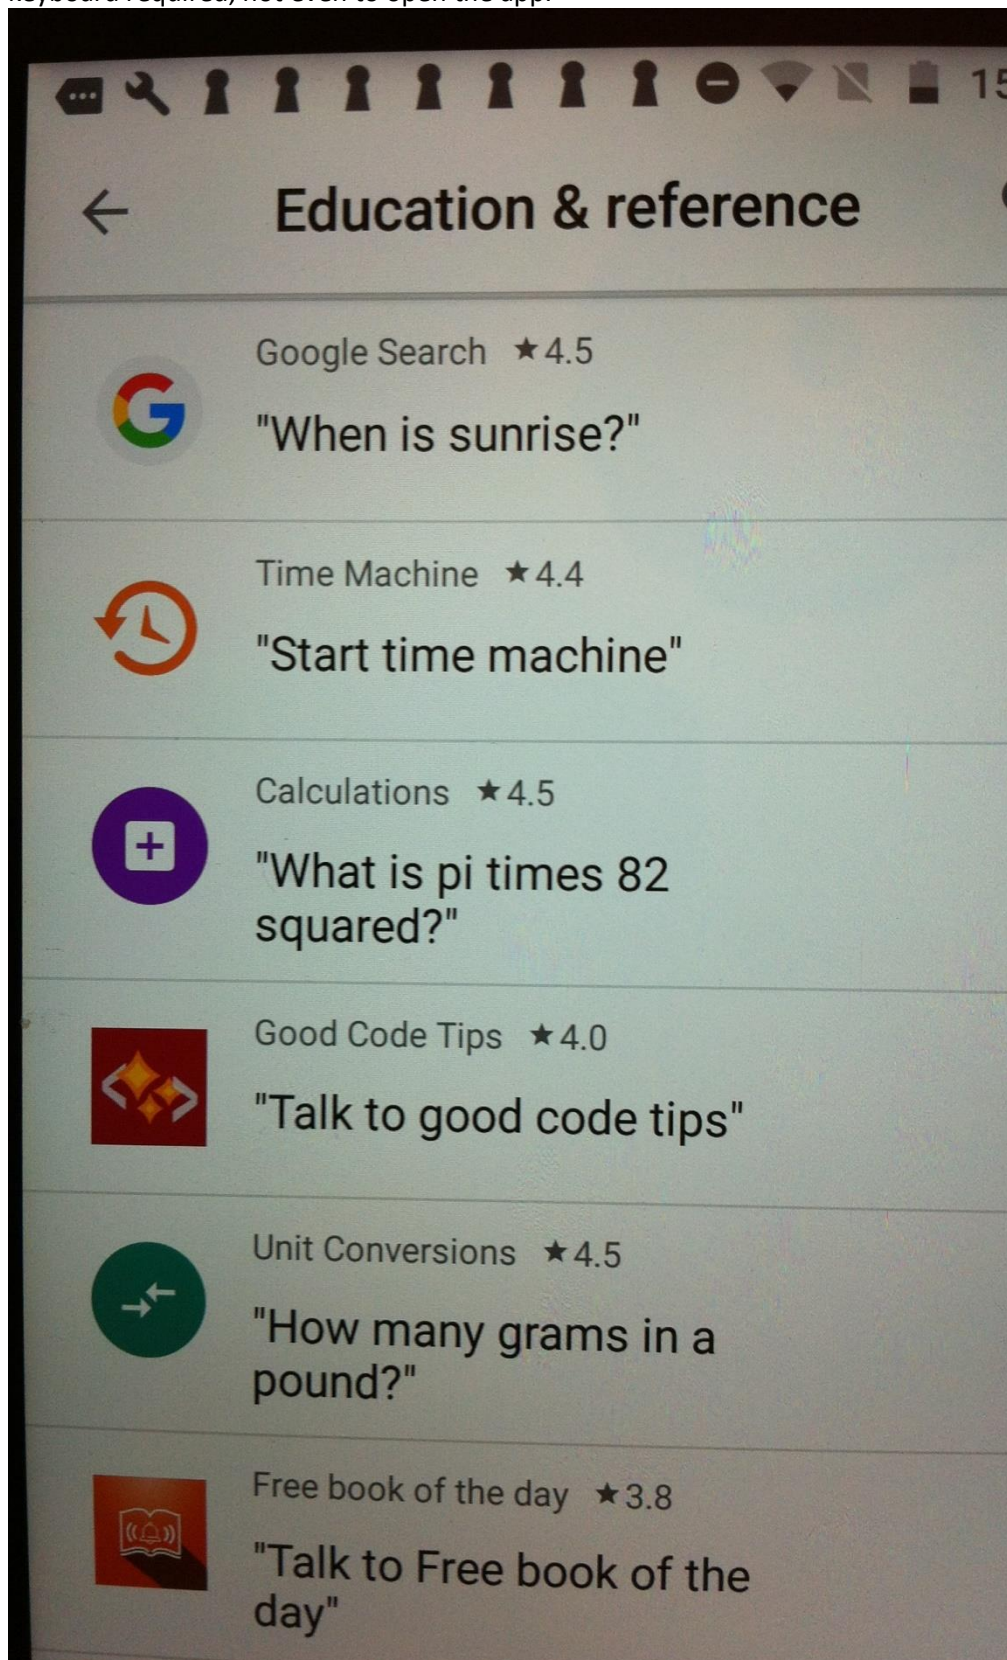

The “Mini” version due out at end of October 2017

The same thing running on an Android phone.

Here are ALL the educational Google Assistant apps that exist right now.

The words in quotes are what you say to open the app, no button presses required at all, no keyboard required, not even to open the app.
