

Programme: BA International Hotel Management

Module: Operating Hotel Facilities

Module code: BMIH4006 Contribution to  
Overall Module 50%

PRESENTATION

# Introduction

- ▶ Welcome, short history  
Welcome to our cleaning team Health and Safety Training Session. Today is the start of a crucial process to keep our employees and guests safe and healthy.  
Why health and safety matter  
Safety and health are paramount when cleaning. You must ensure everyone's safety, productivity, and comfort in addition to following the rules. A clean environment affects guest satisfaction and staff motivation. Housekeeping accidents and illnesses can harm customers, get us in trouble, and damage our hotel's reputation. All of us must prevent terrible events.  
Training's purpose  
Today's training focuses on teaching you how to follow our Health and Safety Guide.  
We'll discuss critical practices, common dangers, and solutions. Cleaning houses poses risks, but this training will prepare you.  
Quick Look at the Health and Safety Guide  
Start training using the guide we developed in Component Two of our course. It has detailed cleaning regulations and directions.  
This guide is more than simply paper—it's a blueprint for safe daily work. Chemical safety, equipment use, PPE, emergency response, and more are covered in detail (Behnke et al., 2014).

# Contents Table

- ▶ Our cleaning team's Health and Safety Training is examined in detail here (Casado, 2012). This presentation covers everything you need to know to keep and improve our activities. The following will be discussed:
  - Housekeeping Safety and Health
  - Training summary and objective.
  - Study safety and health.
  - Why following key ideas is vital.
  - How to use and maintain various PPE.
  - Hazards of chemicals
  - Handle, store, and distribute appropriate amounts.
  - Equipment use and maintenance
  - Safe work, periodic checkups.
  - Emergency Procedures
  - Addressing various situations, exits, and equipment.
  - Health and safety implementation
  - Helpful tips for reporting hazards.
  - A summary or conclusion
  - Remember and ask.

# Understanding Health and Safety

- ▶ Health and safety go beyond following guidelines when cleaning. They explain why each rule affects our health and operations (Cottrell, 2019).  
Important ideas: Understanding risk assessment, danger detection, and accident prevention. By knowing these concepts, we can anticipate dangers and prevent mishaps (Fallon & Rutherford, 2010).  
Why adhering matters: You can't skip health and safety requirements. It protects the person, team, and guests. A safe, healthy community is the goal.

# Personal Protective Equipment (PPE)

- ▶ The first line of defence is PPE. Knowing what to wear and how to clean is crucial. PPE includes masks, gloves, shields, and aprons. Each part protects you from toxins or slips and falls.  
Usage and Maintenance: Wearing, cleaning, and storing PPE properly ensures proper function. To maintain their performance, check for wear and tear regularly (Ferdinand & Kitchin, 2017).

# Chemical Safety

- ▶ We prioritise chemical safety because we use several cleaning products daily:  
Handling and Storage Safety: Always use explosives safely and follow instructions. Protect chemicals against food and unauthorised access in labelled packaging (Quick, 2020).  
Correct dosages and labels: Safety, efficiency, and cost savings are all reasons to utilise the proper dosage. You must read chemical cautions to utilise them safely (Raghubalan & Raghubalan, 2016).

# Equipment Use and Maintenance

- ▶ Tools can be hazardous if misused: Use it safely by following the package instructions. Use the right tool to avoid injury.  
Maintenance checks: Regular inspections and repairs ensure equipment is safe and operates properly, reducing accident risk (Rogers, 2008).

# Emergency Procedures

- ▶ Being prepared can save lives:  
Emergency procedures: Learn fire, chemical spill, and other emergency procedures. Quick and calm action is crucial.  
Emergency exits and equipment: Learn where emergency exits and other tools are. Practices prepare everyone (Sharma et al., 2019).

# Implementing Health and Safety Practices

- ▶ Making use of our knowledge:  
Useful Tips: Simple practices like garbage removal and reporting unsecured wires improve safety.  
Incentives to Report: A safer society allows people to report dangers without fear. Your awareness matters (Tesone, 2010).

# Conclusion

- ▶ Our cleaning work's most critical health and safety issues were discussed today. Everyone is accountable for safety. Your work is crucial to workplace safety. Now for questions: I'll let you ask anything you want now. We should all understand and feel comfortable using these strategies.
