

Environment Design

Ellis Christie

What this thing Actually Looks Like!

Final Render

Initial Concepts

Original concept created through writing. Abandoned hospital ward.

Eventually they go into a room with torn safety tape and various warning signs covering the door. It looks to be an old hospital ward, with a few of the beds being blocked off entirely with barriers, with the entire area around each of them being heavily stained and contaminated with void. Elliot walks past without paying them any mind, instead removing a grate on the back wall and ducking to walk through the gap

(Screenshot from Discord chat history- Unable to find further written description.)

Concept
sketches

Models and Research/Referencing

Overall.

4. Biocontainment

Biocontainment is a component of biorisk management. The overall objective of biocontainment is to confine an infectious organism or toxin, thereby reducing the potential for exposure to laboratory workers or persons outside the laboratory, and the likelihood of accidental release to the environment. Physical containment is achieved through the use of laboratory practices, containment equipment, personal protective equipment, and laboratory and facility design.

HAZMAT Suits – Levels of Protection

Level A

Level B

Level C

Level D

Walking
through my
nonsense

2.

1.

Intensive care units (ICUs)

What is an intensive care unit (ICU)?

Intensive care refers to the specialised treatment given to patients who are acutely unwell and require critical medical care.

An intensive care unit (ICU) provides the critical care and life support for acutely ill and injured patients.

7.

Models and Putting the Scene Together

Making sense of
nonsense once again.

Texturing- A wholehearted attempt ending in disaster

(A taste of success)

Let me explain my process and what eventually went completely wrong!
(I unfortunately did not take screenshots- this was immensely stressful and it slipped my mind)
