

Project Start-up Exercise

As a potential Archaeological Contractor, you have been approached by Goldcliff Tidal Ltd. They have indicated that they are considering developing a test tidal energy weir in the Severn Estuary at Goldcliff on the Gwent Levels, Wales and have provided a map defining the proposed development area. At this stage they have not applied for planning permission etc, but are seeking information on the possible archaeological constraints in their proposed area. If the site proves highly problematic, they might choose to prioritize an alternative location.

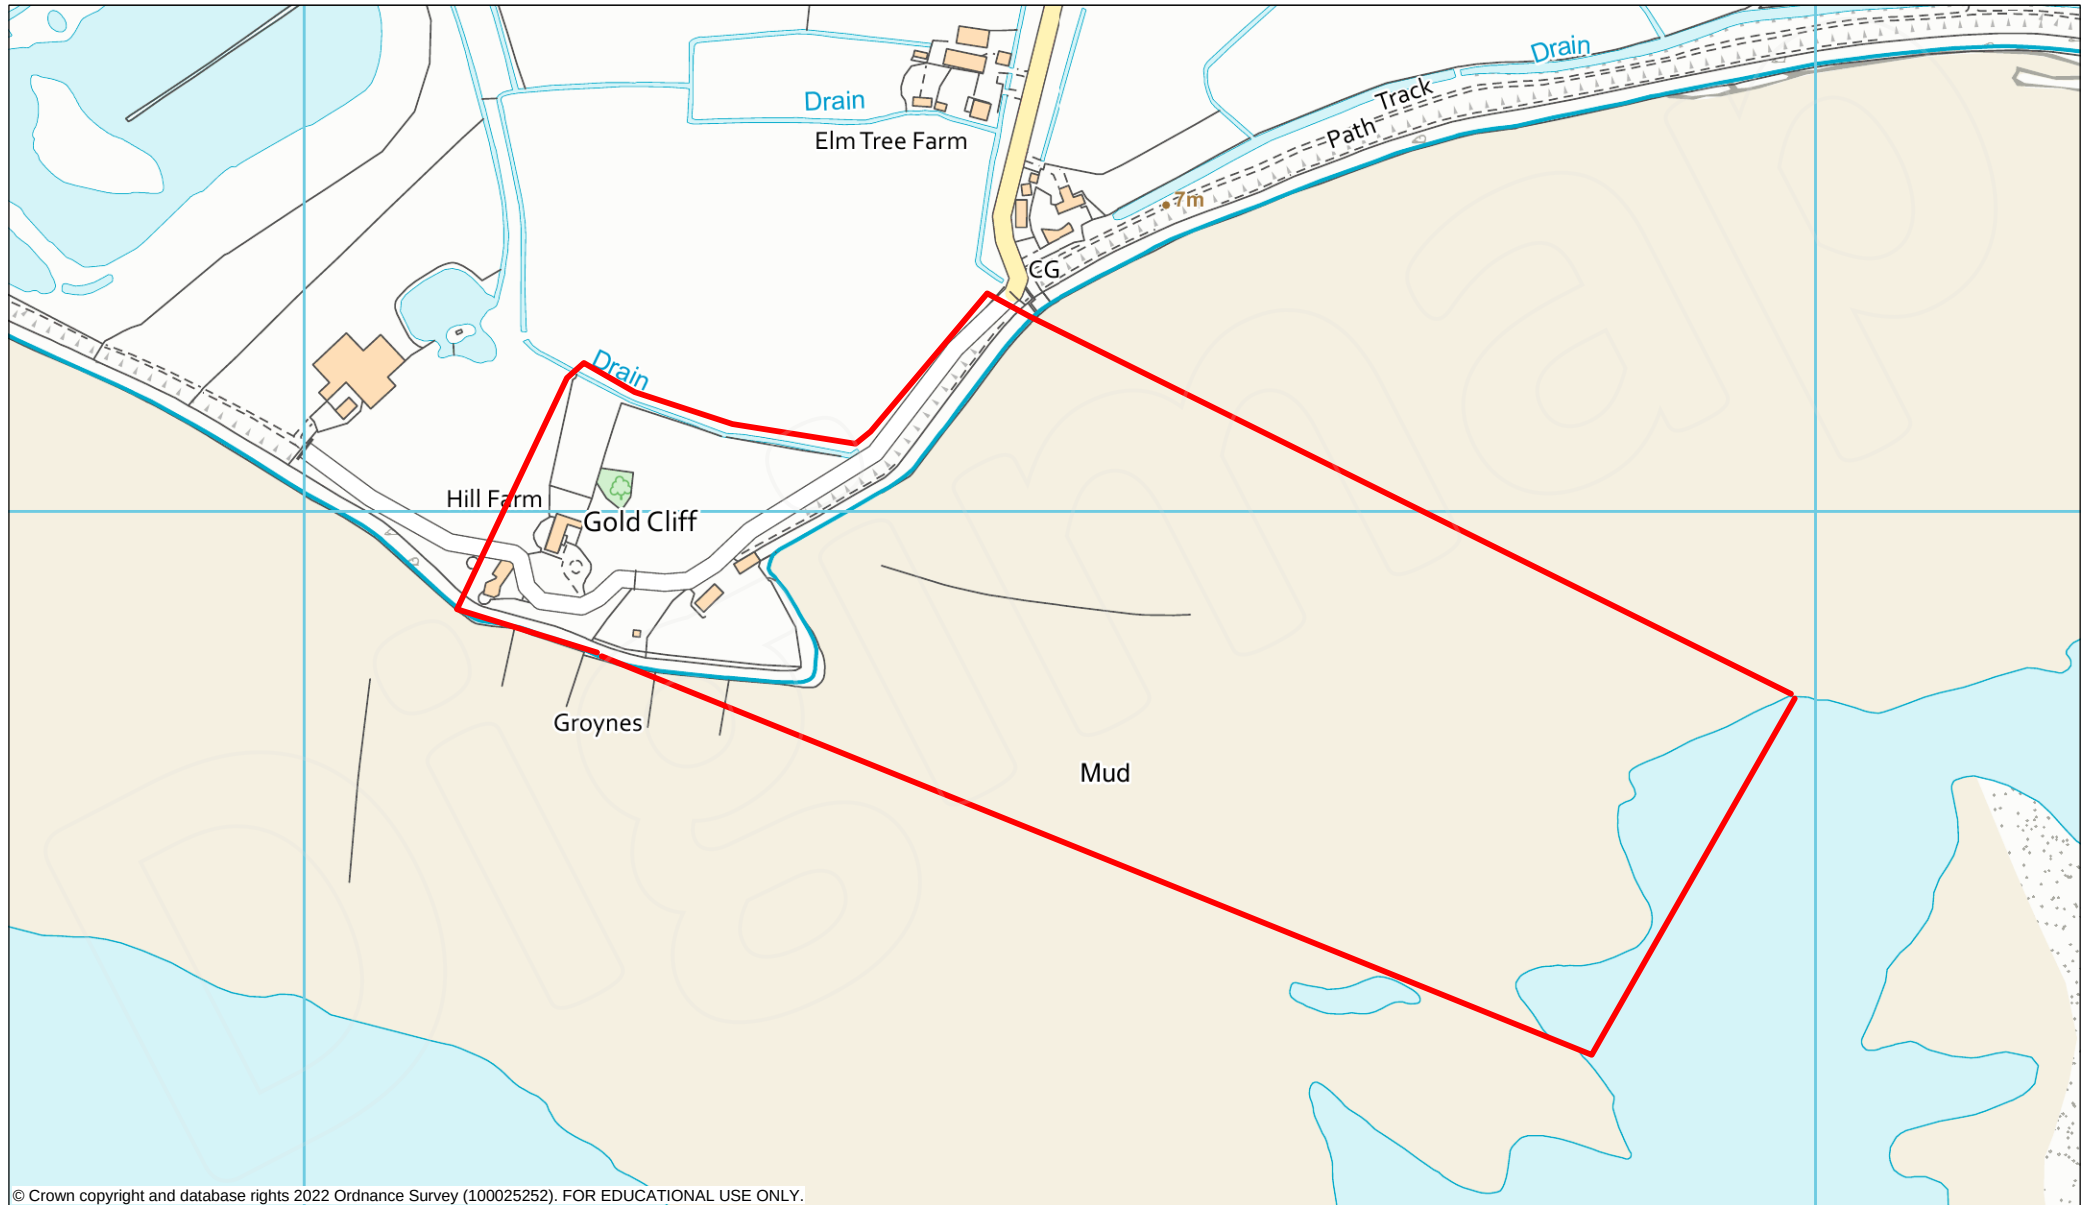

Your aim is to produce a project proposal for an investigation of the archaeological potential/sensitivity of the defined area.

What further information do you need about the development?

How significant do you think heritage issues will be in determining the result?

What stages of work would you propose?
