Student ID: 2411669
MODULE: DIGITAL SKILLS LCLM44002
Lecture's Name: Amitave Banik

TOPIC: BASIC DIGITAL SAFETY

BASIC DIGITAL SAFETY INFORMATIVE POSTER

How to ensure digital safety online and below are the 6 steps

CYBER ATTACKS

Cyber attacks are increasing rapidly as many people are now using digital devices and internet penetrators are taking advantage of that. Therefore, awareness must be created to prevent such circumstances.

STAY

DIGITAL KNOWLEDGE

As the world is moving in the direction of technology, digital knowledge must be acquired in order to stay safe on line. Everyone need to have a level of knowledge about digital safety.

ONLINE SAFETY

Children need to be safe whilst using digital devices and with their access to the internet. Even though children are permitted to use digital devices in their education it is also important to be competent about digital safety. They have to be protected against any form of online dangers.

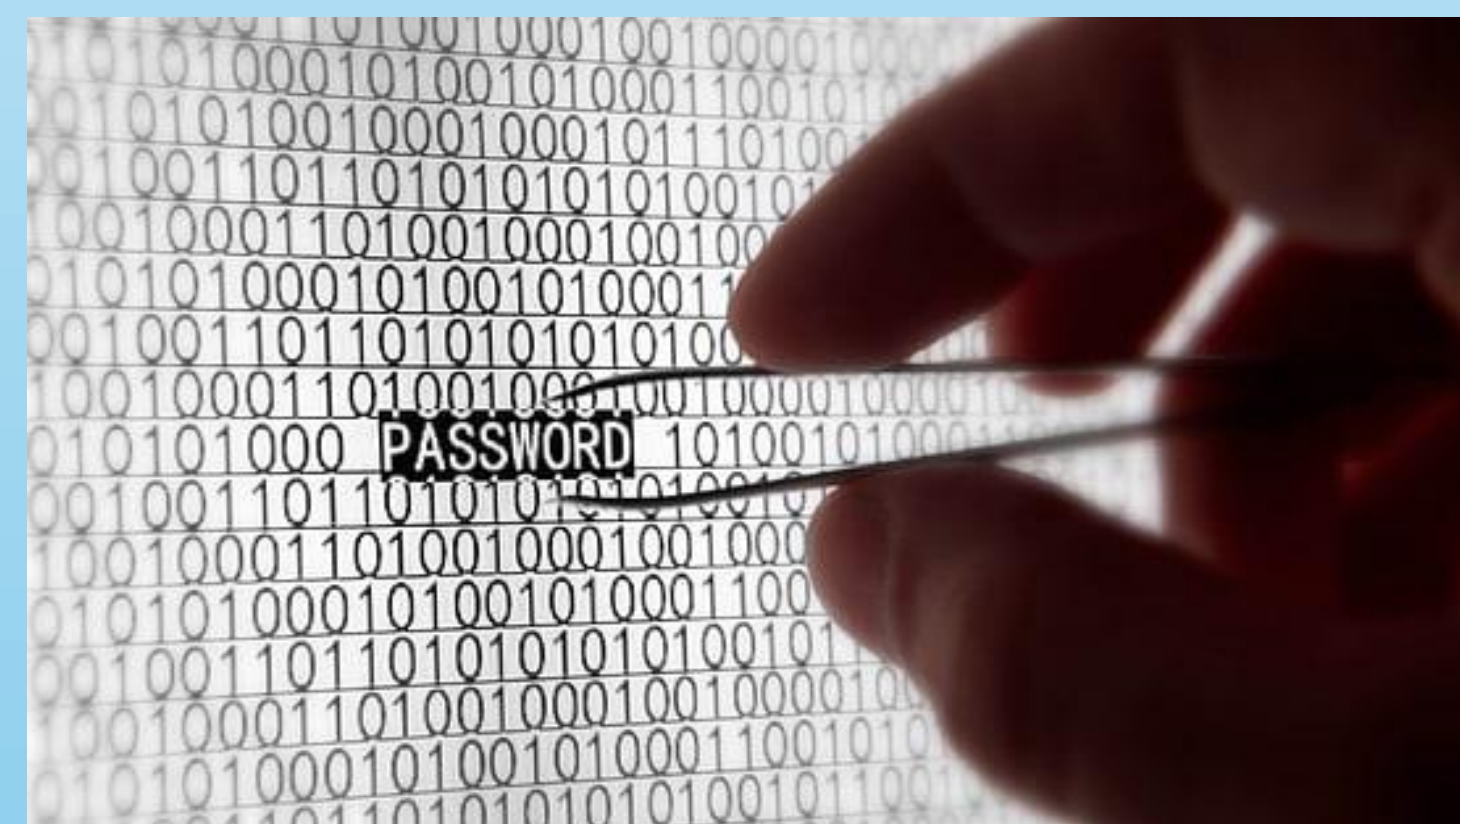

PASSWORD

It is of the highest importance that one creates a strong password that will be impossible for anyone to create your password. It is also advisable not to share your password with anyone.

SAFE

COMMUNICATION

Social Media has become one of the means of communication where people can communicate easily. It is very important to be aware that not everyone you can share every piece of information on social media. You should not communicate or share your personal information and sensitive information on social media

ONLINE

DATA BREACH

On the basis of examination in relation to digital technology safety, firms are effectively failed in the form of data breach by negligence which has caused organizational problems in their firms (Say, and Vasudeva, 2020).
