Description

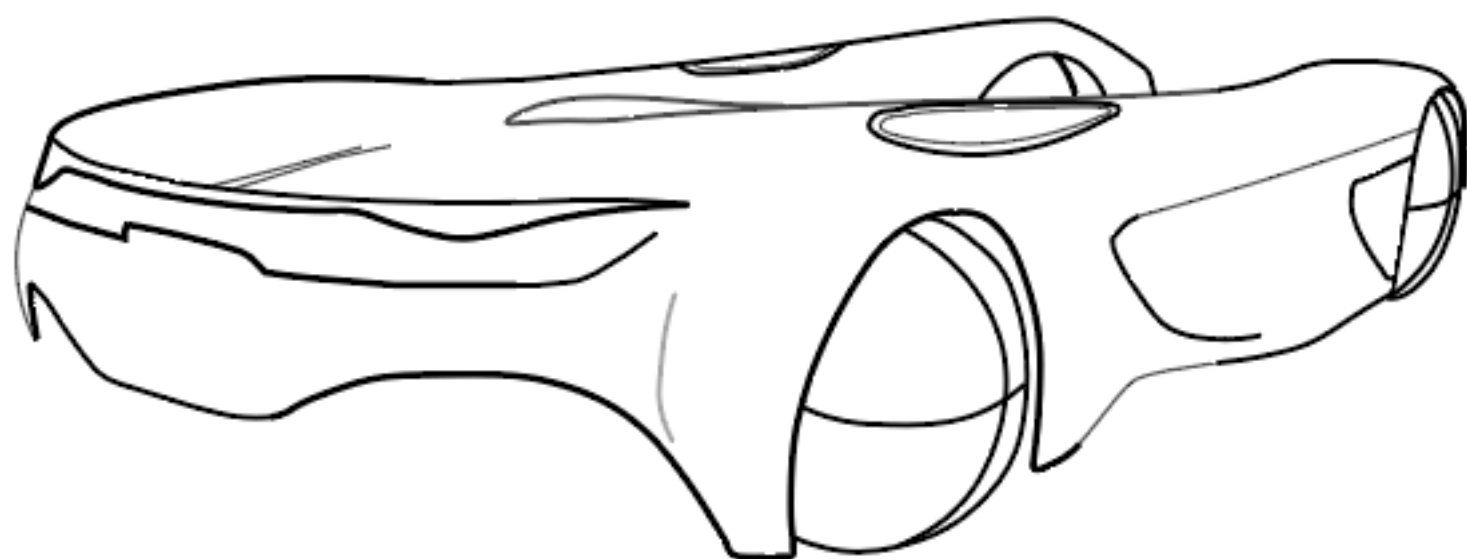

Time Travellers from the future have warned about a devastating continuing covid 60 pandemic from 2060. Reports have said this mutation to be most lethal from the ones in the past, spreading rapidly clearing nearly 50 percent of the population. It could be the end of the world if not controlled. With the consultation of future designers we have come together and designed a special car for present covid 35 in order to curb the pandemic and prevent future chaos. The car is designed to be cleaned through uv rays through emitters in the interior which could be programmed and scheduled hours or minutes before entering the vehicle, keeping interior hygienic. Access to the vehicle is available through the app with iris scanner which would unlock the door itself preventing any unnecessary physical contacts with the surface. Some additional design features would be distance between the passengers meeting social distancing, Availability of emergency oxygen masks. The car has the ability to be driven by either passengers together or separately in a form of single occupancy bikes. Our use of magnetic levitation tyres would help with parking in the compact spaces. Lets adopt changes and look forward to a better and healthier future.

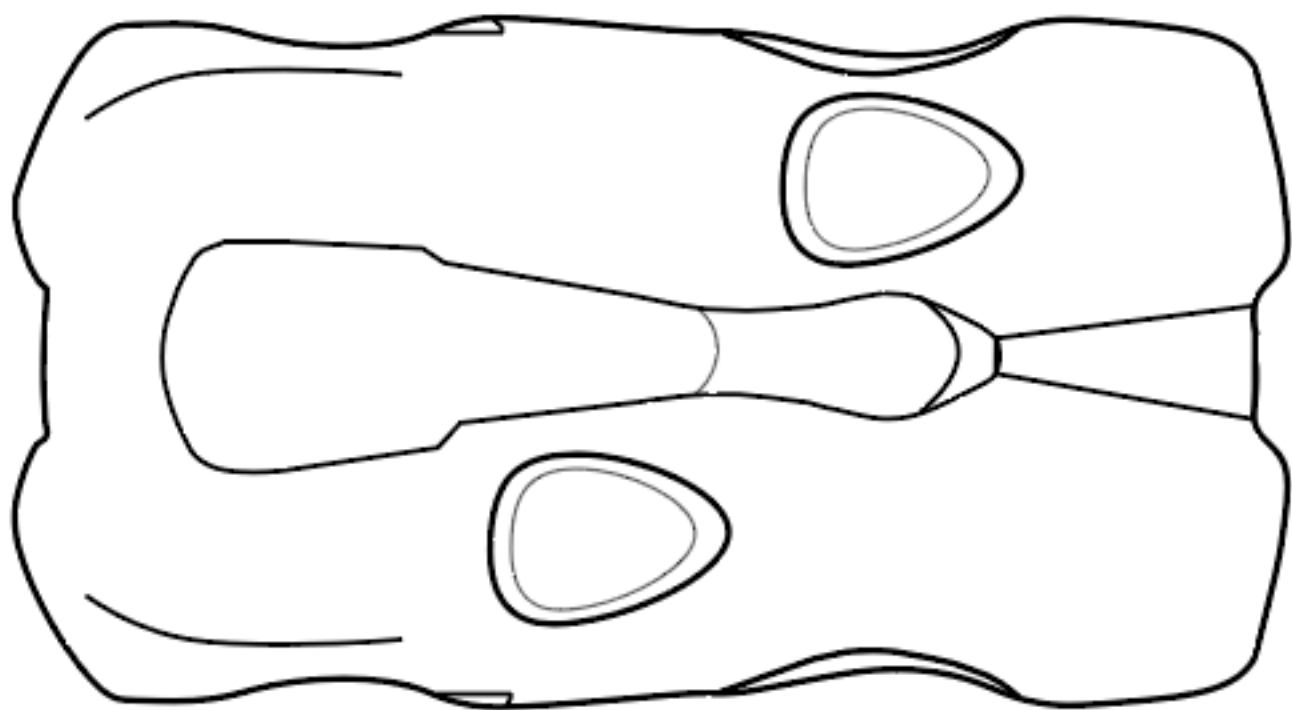

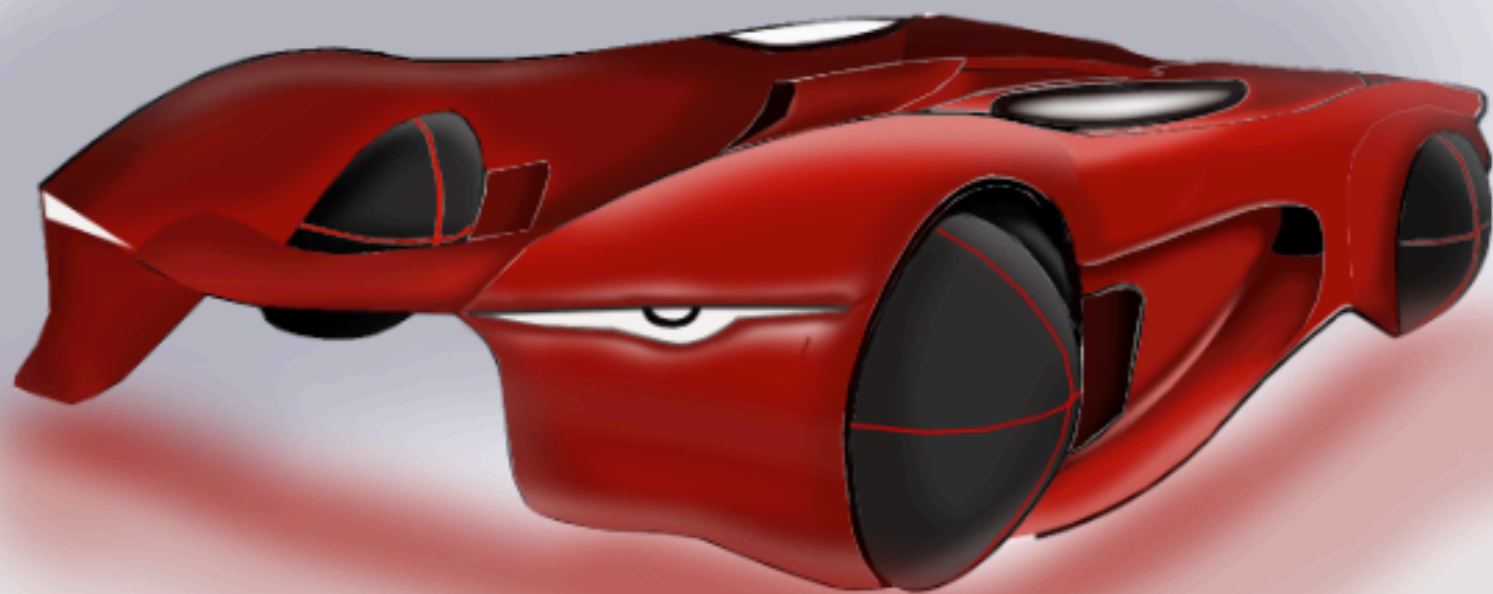

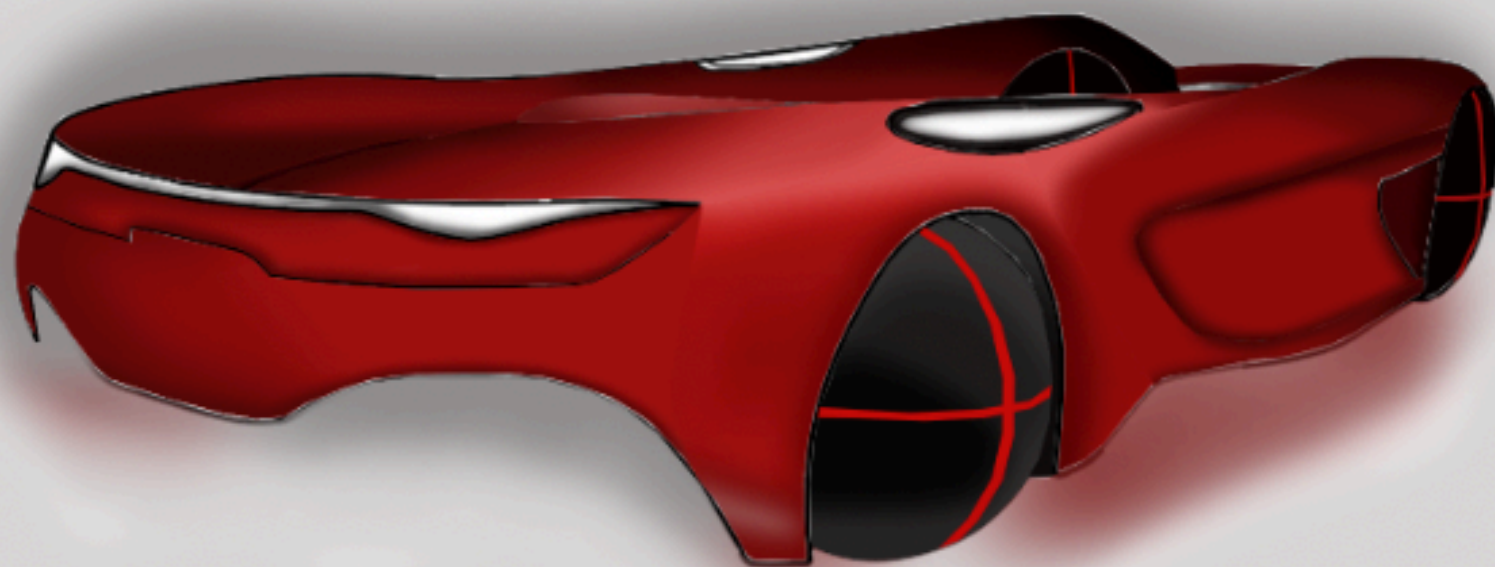

- Tyres
- Drive train
- Batteries
- Male Ergos
- Seat
