

Where we explored

I chose to discover the beautiful wild spaces behind my home.

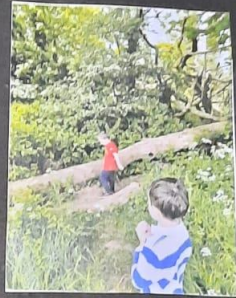

From these pictures it is clear to see many people do not understand the beauty that is on their doorstep.

This area became important to us during lockdown. So I decided to bring my children along with me during this exploration.

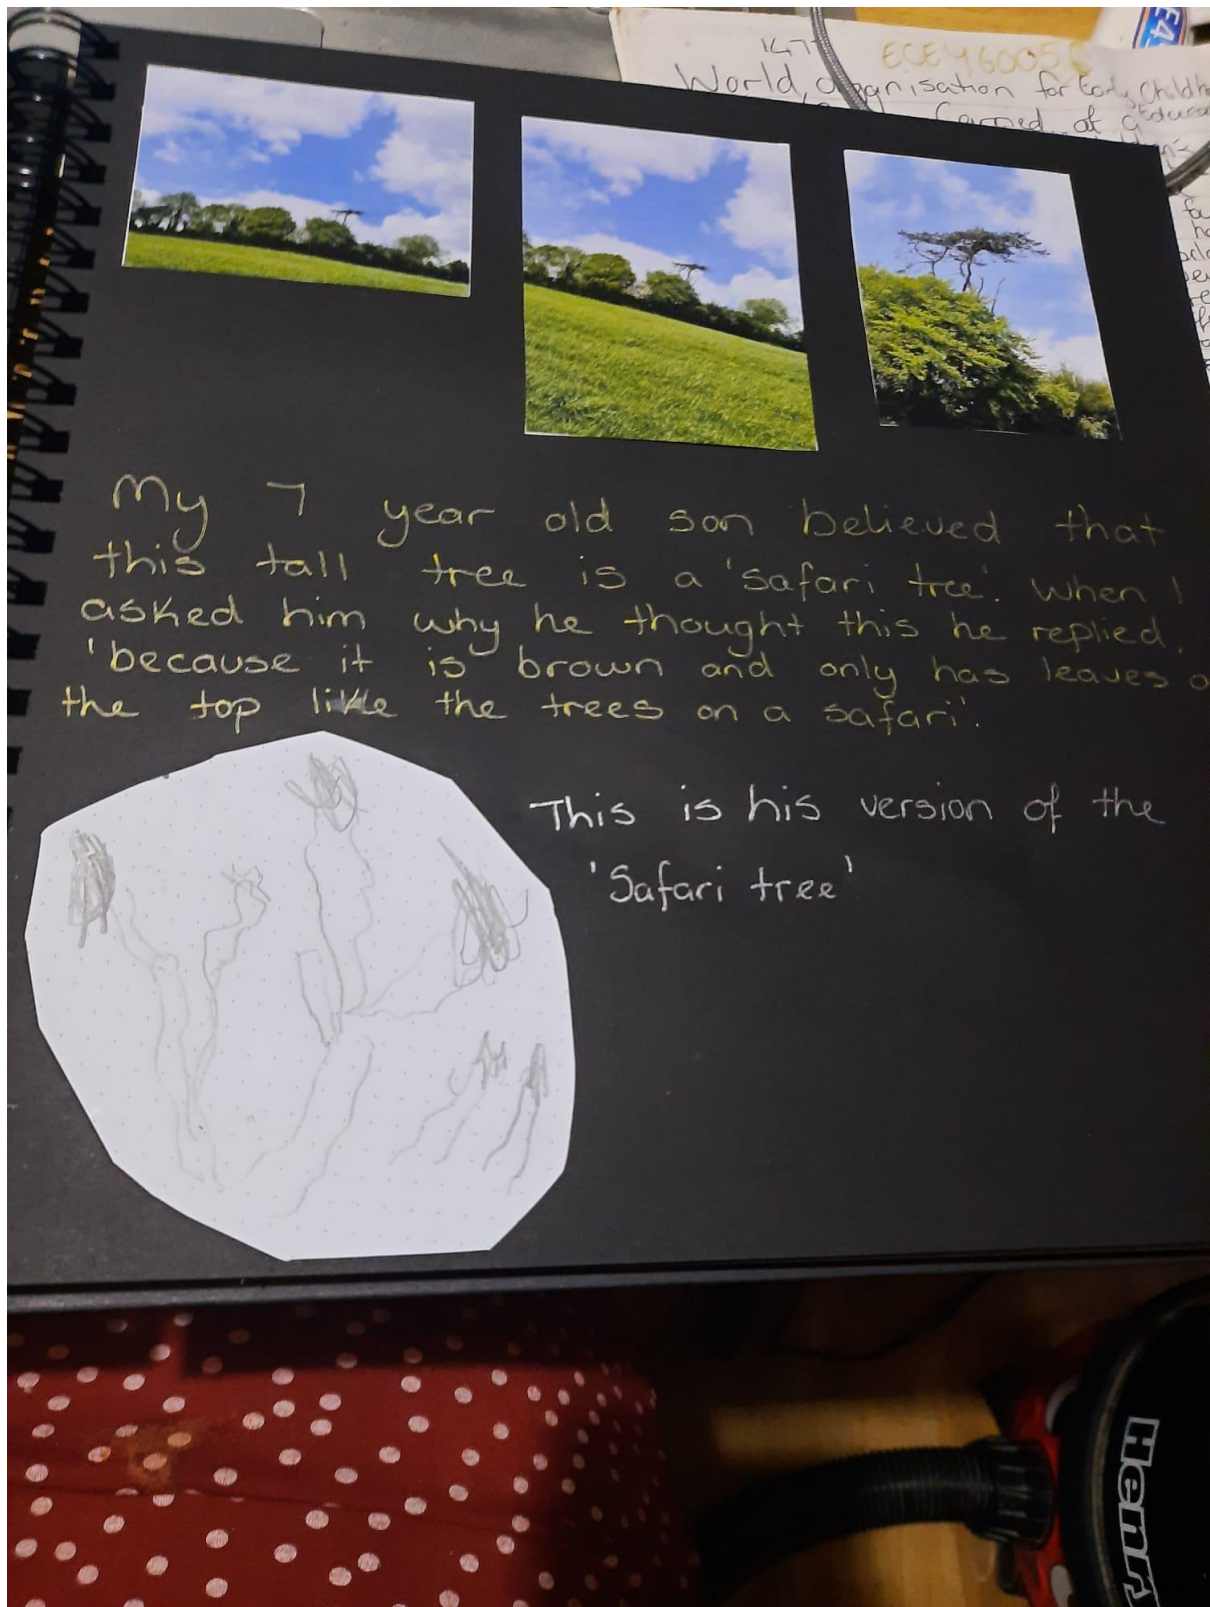

When we first began walking through the tall grass my children were afraid as some parts of the fields the grass was up to their shoulders, but by the time we were walking back they were running through it really enjoying nature.

my six year old son made the sweetest comment while walking through the fields
'We have to look after nature because it is our w

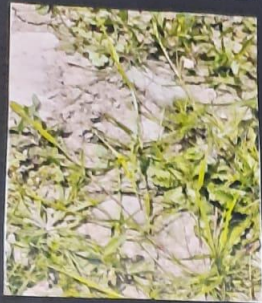

The leaves we found
with purple dots on.

Bugs + Insects

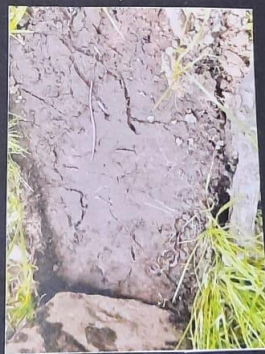

Bug hunting ☺

From this bug hunting I decided to make a bug hotel towards this assignment.

one of the smallest butterfly, had ever seen.

we found lots of bugs under this large rock. worms, spiders and beetles.

Bark Marking + Tree Investigating

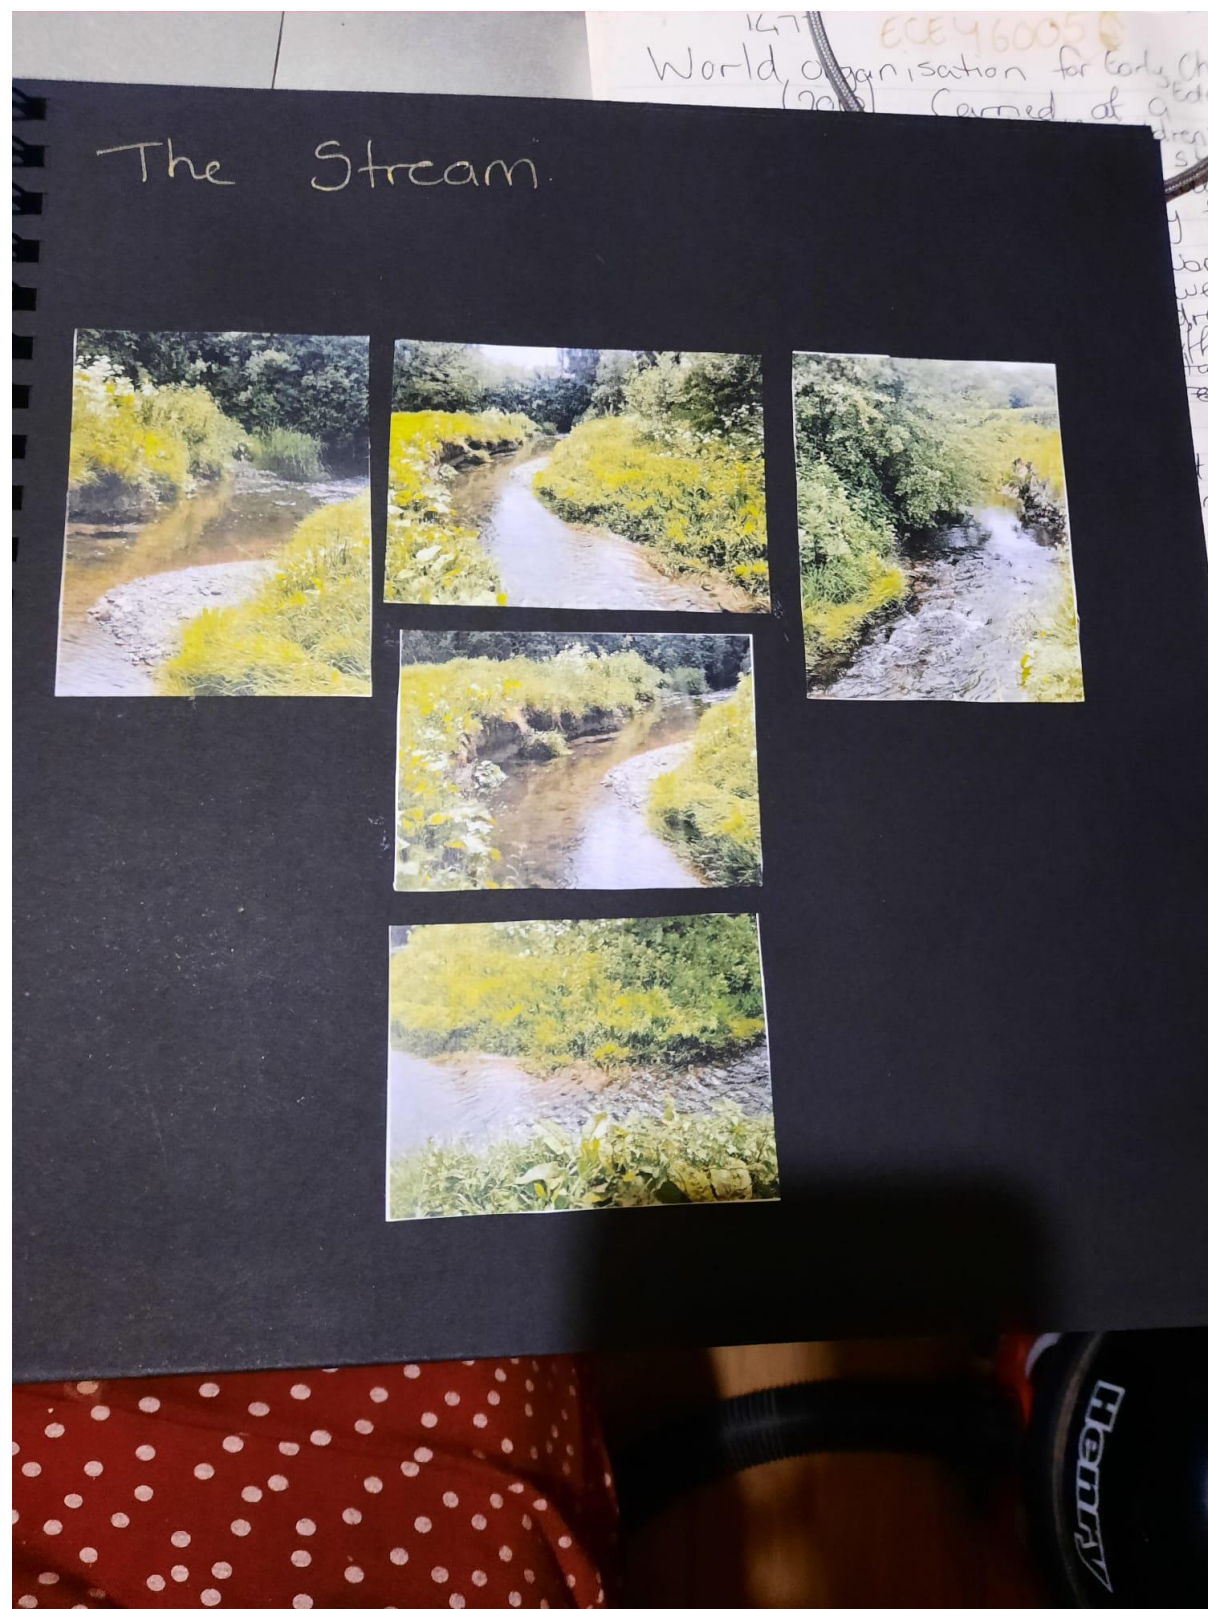

← This tree had tiny holes that we found out could be from bark beetles

we had lots of fun finding out the different marks we could make from rubbing pencils over paper on the tree

We found lots of rubbish on our walk and picked it up and discarded it in the appropriate bins in our home.

I have now spoken to other parents from our street and will be going out regularly to check for rubbish to make sure our street + wild spaces stays as it should be. 😊

Firstly I found a brick with holes that was perfect to attract bees and spiders.

But also perfect to hold up the second floor of the hotel.

BUG Hotel.

On the first floor we placed pine cones, rocks and bark. These natural items are perfect for small insects such as woodlice, beetles and spiders.

Our Pond made from
Recycled wood
We made this pond during lockdown from
old items we had in our garden.
It has an old bamboo fence around
the outside and is filled with
goldfish.
