Q1: Innovation

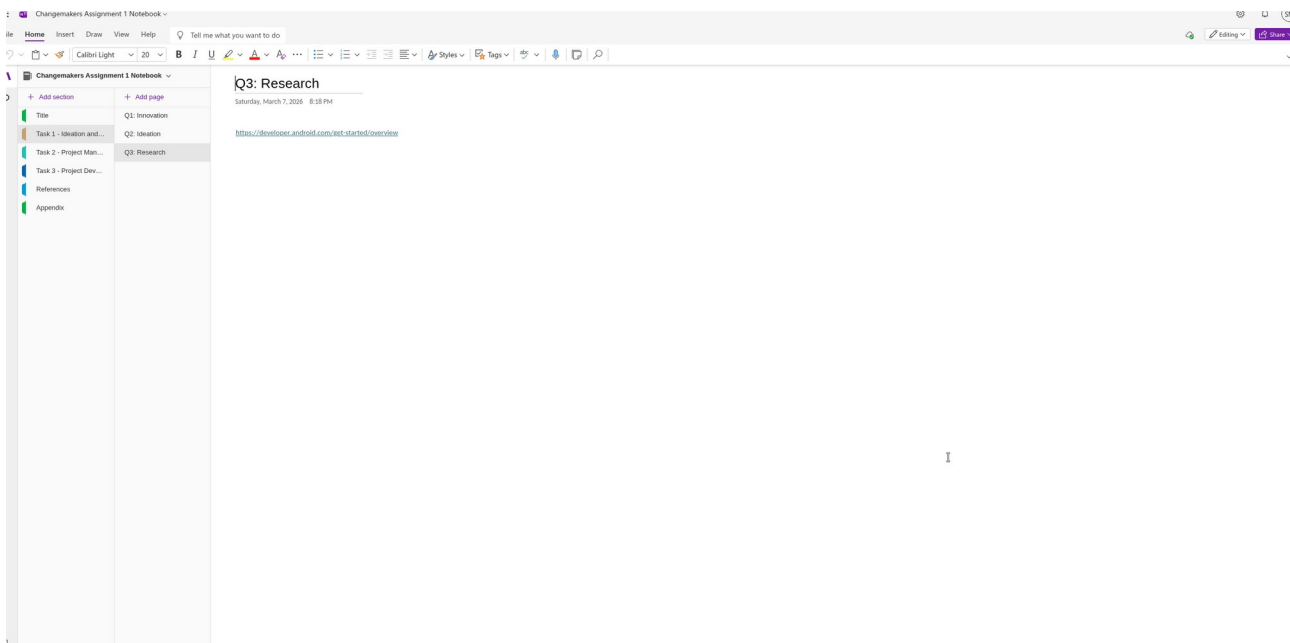

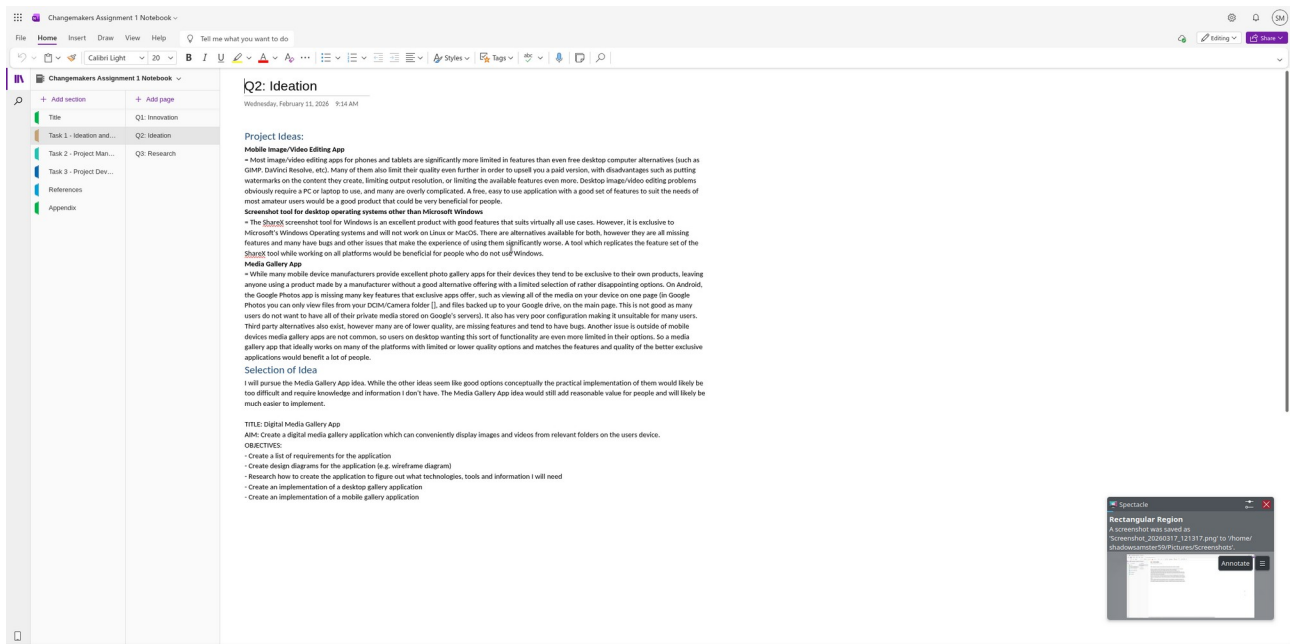

Wednesday, February 4, 2026 10:27 AM

TASK - Document a summary of some of the areas/concepts from Topic 1 of Unit 1 on Moodle.

Section 1: Innovation is everywhere discusses how various innovations have impacted the world. It mentions important innovations in history, such as language, agriculture, science and technology. It talks about how various innovations came to be, and says that everyone can create innovations. It also makes the point that life today is better than it used to be thanks to these innovations, and provides some statistics both to support their point and demonstrate that people are overly pessimistic about the current state of the world and the impact of major innovations.

Section 2: The onward march of technology discusses current evolutions in technology and how they are likely to impact our world in the future. It discusses advancements such as robotics, artificial intelligence and the continued increases in computing performance, and how these could be the next evolutionary advancement that changes our world.

Section 3: Defining Creativity discusses individual creativity. It says that despite some people believing that only certain people are creative, and sometimes that they are not, others believe that everyone can be creative. It says that creativity is important and directly linked to innovation, and that life would never get better without creativity.
