

Kieron Williams - Feedback

Common Assessment Criteria Applied	Marks Available	Marks Awarded
1. Engagement with Literature Skills		
Generally a fair amount of research has been carried out into the various issues found with database security and how to overcome the threat. However the assignment does lead to providing a more practical solution around the database server and this was poorly executed	20	7
2. Knowledge and Understanding Skills		
Core understanding of database security is present with a number of relevant threats/solutions is obvious. Understanding of SQL and their scripts is present, but limited in their relevant i.e. not enough scripting	20	11
3. Cognitive and Intellectual Skills		
For what was reported on, the document supplied does relate to the requirements of the report in a limited fashion and does relate to securing a database via SQL Server	20	8
4. Practical Application Skills		
It would be fair to comment that the student has identified a number of issues that could be found with a weak database and there are suggestions on how to overcome the problem. However, there was not enough SQL scripts in order to make the sample database more secure. Student has not realised that a discussion around the data (with suitable SQL Scripts) should be included.	30	11
5. Transferable Skills for Life and Professional Practice		
Report and its formatting/presentation is of a good standard. However, as this assignment does have an element of scripting, commenting code/indenting code should have been a little better	10	5
