

Land of Opportunity

Nestlom Corporation

The Saltshire Town Plan

Saltshire is a community that has been in decline for several years. Unemployment has boomed since the closure of the local salt mine. A government incentive has been launched to breathe new life into the region.

An area of land has been designated as being appropriate for redevelopment. The government has decreed that there should be allocation for homes, industry, a new school and, contentiously, an open prison.

A government plan has been put forward that is universally loathed by the four parties involved in the development of the above, Bensimon Homes, Nestlom, Group Five Securities and the Saltshire Sports Academy. To address this, before development starts the government have given the four groups the opportunity to come to a democratic solution.

Your mission is to negotiate a solution that is deemed acceptable to all parties. You have 30 minutes to conduct an initial negotiation.

General Rules

1. Once the final borders have been agreed parties will not be able to cross one another's land.
2. Every part of the peninsula should be allocated.

Nestlom Corporation (previously The Saltshire Salt Corporation)

The Saltshire Salt Corporation is a company that has existed for over 100 years, owned by the family of Sir Andrew Saltshire. In 2003 it was aggressively taken over by the Nestlom Corporation, when the mine first started to have problems. There is no love lost between Sir Andrew and Nestlom.

They employ many of the residents of Saltshire. Recently Nestlom discovered a process to create salt from sea water using electricity and want to use renewable energy to further reduce costs. They have been given a limited amount government of money for a refinery which will utilise mainly green technology for power. This power could come from wind, sea or solar. They need land close to the water's edge to make the production of salt cheap enough.

- **They prefer the land that has access to any beach**
- **They need extensive access to traditional electricity supplies**
- **They need road network to transport completed salt.**
- **They do not mind the marsh land area**

Land of Opportunity

	Woods / Trees
	Green Space
	Marsh
	Unfertile Land
	Mud Flats
	Canyon (Impassable)
	Cliffs (Impassable)
	Fresh Water
	Salt Water
	Flat Land
	Mountains
	Small Road
	Motorway
