Table of content:

1 Introduction

2 Rationale of the research

4 Analysis and discussion

5 Conclusion

1 Introduction

I have done a research report on the opinion of the learning process of students from the University of Wales Trinity Saint David London Campus.

2 Rationale of the research

The intention of this groundwork is to find out how many students have been affected positively or negatively by the new teaching methods.

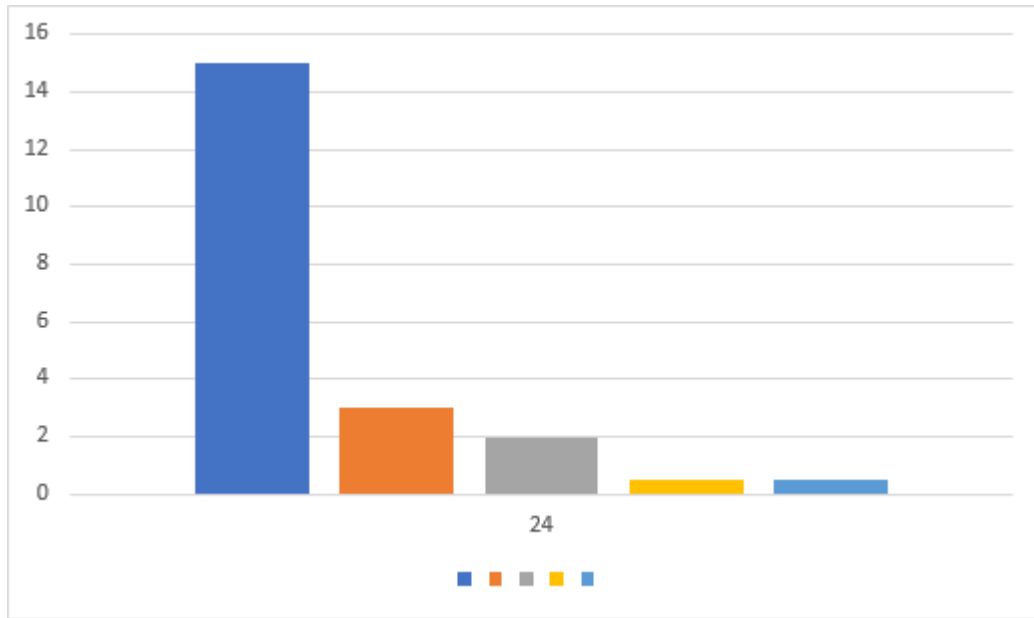

3 Research Methods

In my survey I will have a sample scale with 20 respondents: 5 Likert scale. I will receive data through WhatsApp application.

4 Analysis and Discussion

1, Is it confusing having lessons online rather than in a classroom?

Strongly agree	Agree	Do not know	Disagree	Strongly disagree
15	3	2	0	0

Discussion: From the data collected most students believe that it is confusing to have classroom lessons online.

However, some are not sure. Technological evolution has by far made our lives easier and more efficient. With that said, it seems fit that

we should utilize online learning in our universities.

Or should we, While it may seem suitable that we adapt our learning style to keep up with the forever growing technology available to us, there are many reasons to believe that online learning is not nearly as beneficial to us as traditional style classroom learning.

Online courses don't require face to face interaction with other students or teachers. Information on assignments is posted online and can be completed at your own convenience without having to attend class lectures.

While the leisure of this concept is nice, it takes away from the interpersonal skills that

students need to acquire along with their education.

In a classroom, students may be required to say their opinions. They may be required to give presentations or speeches. They will work in teams with all kinds of people with many differing views.

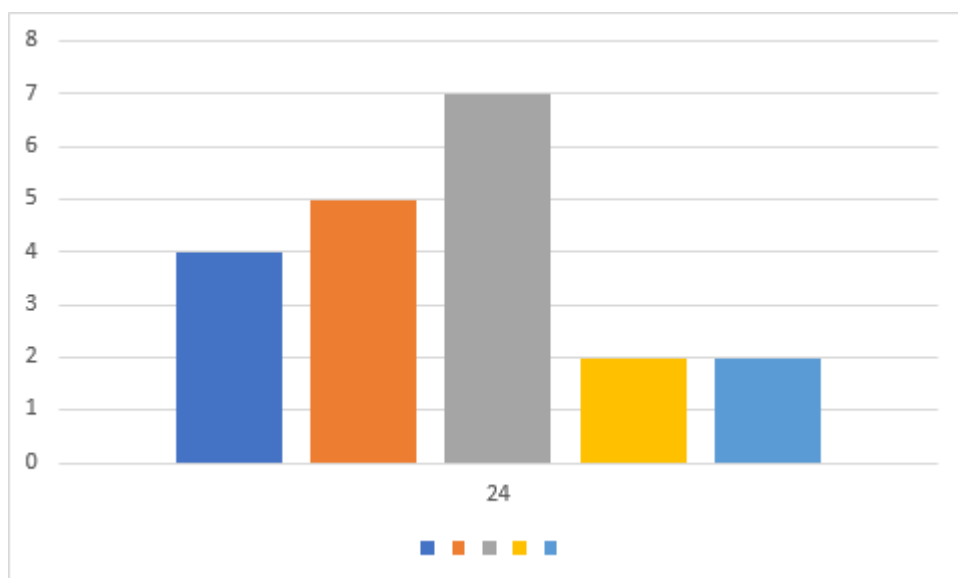

Businesses usually tell university faculties that they wish graduating students had more interpersonal skills. This is crucial to succeeding in their careers.

Traditional style learning teaches this. If businesses are telling universities that they wish these skills were more evident, this must show that online courses are not the answer.

On the bigger scale online courses will only hurt a student's ability to speak and interact with others in a way that will help in their life and career.

2, Is it easy to communicate with your classmates on Microsoft teams?

Strongly agree	Agree	Do not know	Disagree	Strongly disagree
4	5	7	2	2

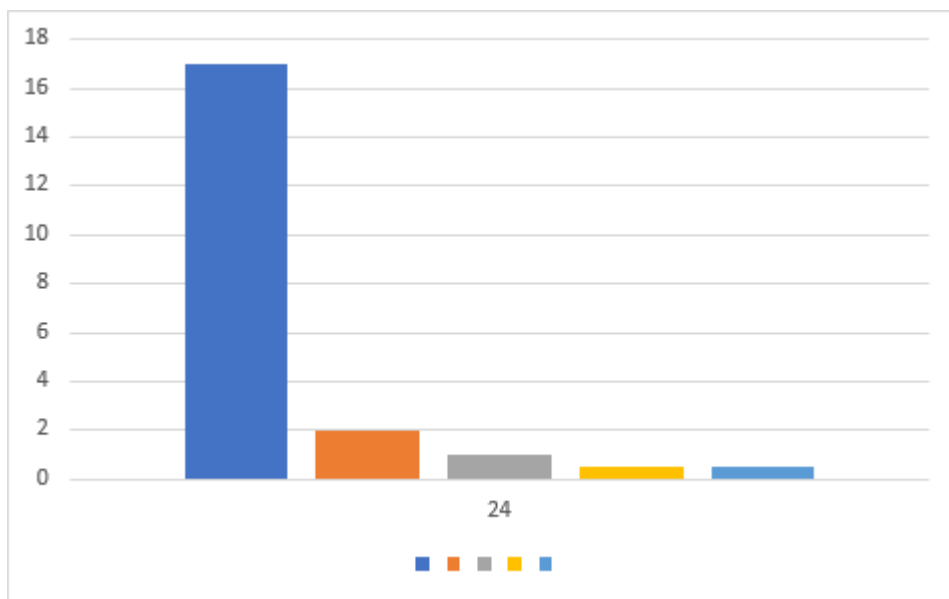

Discussion: Most students do not know if it's easy to communicate with other students on Microsoft teams with the help of the students that strongly agree and agree they can help make their online experience easier.

Microsoft teams allows you to have your classes using Teams, you'll be able to connect with your classmates and ask your lecturer questions about your assignment and track the work you've got coming up in one place.

Microsoft Teams is an online hub that brings conversations, content, and apps together in one place.

3, Is it harder to concentrate at home then in the classroom?

Strongly agree	Agree	Do not know	Disagree	Strongly Disagree
17	2	1	0	0

Discussion: As we can see nearly all the students agree that it is harder to concentrate at home then in a classroom environment and some students do not know.

While it sounds like a dream studying from home is not always easy to set your own schedule.

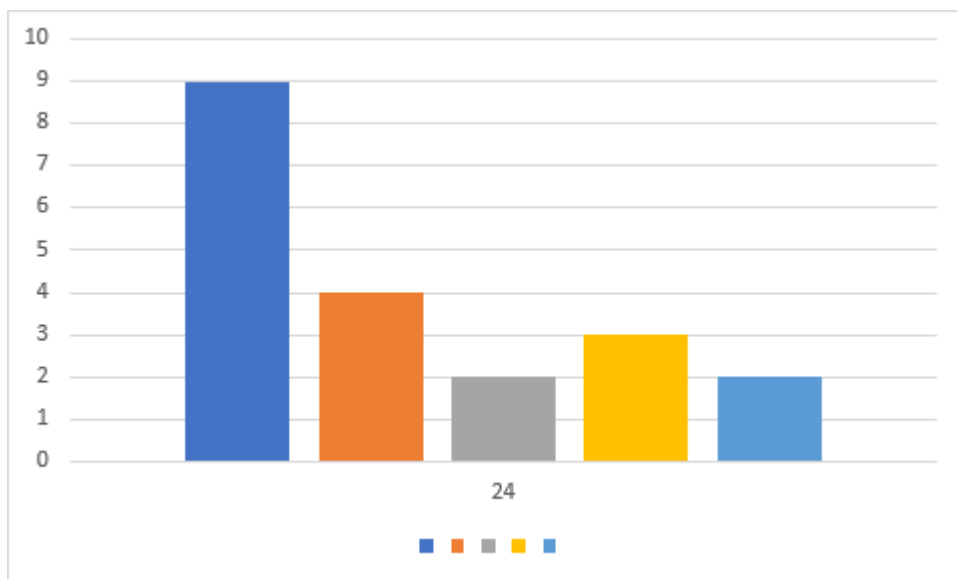

Whether you're transitioning to at homework you'll want to avoid getting sucked into being distracted. When you have no one looking over your shoulder, it's easy to go off course.

Without the watchful eye of your lecture or clear expectations on your time, you can be left feeling aimless and easily distracted. This is why having a schedule is crucial.

It is easy to get distracted when trying to complete in class tasks from home until you can separate studying and personal. It can take time to get serious at home if you're not use to it. Studying at home is an exercise in learning about yourself.

4, Do you think your get more support by lecture in the classroom then online?

Strongly agree	Agree	Do not know	Disagree	Strongly disagree
9	4	2	3	2

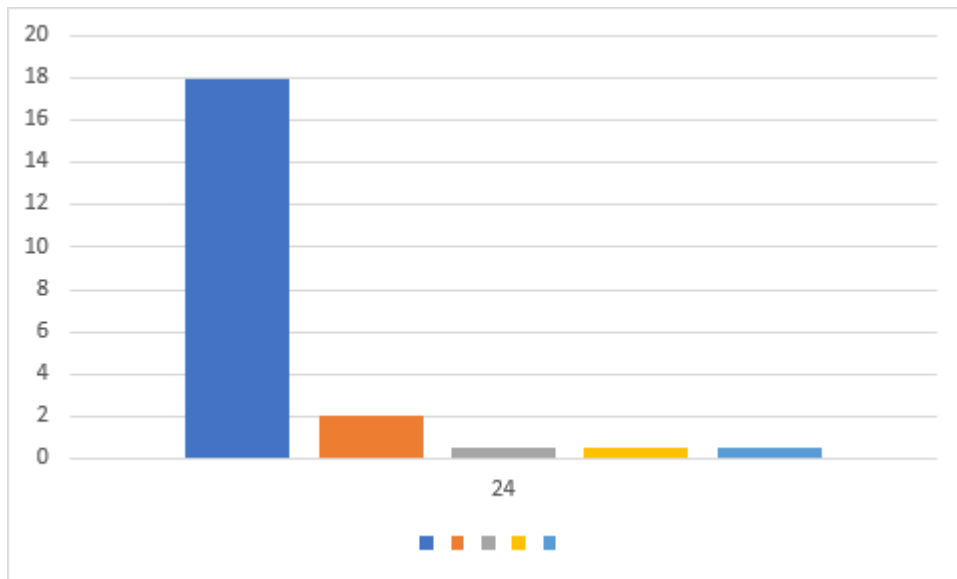

Discussion: Almost all the respondents agreed that they get more support by the lecture in the classroom than online.

Students rarely come to lectures with no knowledge of the topic. Finding out what they already know can help understand how they learn so the lecture can teach at the right level of academic challenge and identify and correct student misconceptions.

5, Due to the pandemic situation has it been hard studying from home.

Strongly agree	Agree	Do not know	Disagree	Strongly Disagree
18	2	0	0	0

Discussion: Nearly all the students feel that since the outbreak it's made it hard to study at home having so many distractions around. None disagrees with this statement.

It can be confusing and unsettling when your regular routine is disrupted. If your university has decided to take precautionary measures during the COVID-19 pandemic you will find yourself having to learn how to learn from home.

When studying from home it is important to remember to have a routine, discipline and take breaks.

Maintaining your routine, as much as possible, is key to a successful transition in any situation. You will have been given your assignments and information from your instructors prior to the closure of the university so making sure you have everything you need will help.

You should complete your subjects in the same order that you normally would at university.

5, Conclusion

The data I have collected shows that majority of the respondents have found it challenging

with having to adjust to the new way of learning from home online.
