Kiss of the Life

My imagine Exhibition is about humanity that I would try to explain just in few words and show with the five Artworks. I was trying to imagine the world after many years. Do on this planet Earth still can live people or maybe androids or aliens. How can the Future World look like? Do I would love to live there. I could say maybe no because of all the technologies we become less close to each other less care about what we have and how many we need. Quarantine around the world makes me feel very strange. We become more closer to all the people who are very far from us and become very lonely with people who are around us. Isn't that true? All this emptiness and loneliness we drown into the world of technology just to have a fake feeling about safety and friendship. Man needs love in any form even fake.

I was thinking to put my imagination Exhibition in space or moon or desert. But after a week of researching, I found the perfect place Louvre Abu Dhabi Art Museum building on the waterfront of Abu Dhabi's Saadiyat Island a man-made island on the coast of the United Arab Emirates capital. It is the most modern Art Museum in the world. Artworks that I chose to exhibit there are very simple and so it can be a huge contrast.

Louvre Museum Circulation

People will no doubt continue to pursue scientific progress. But will they succeed in creating a society in themselves where everyone cares about each other? Today, the driving force of the world is selfishness and greed. Artificial intelligence technology is not new in the world, but the globalization of computerization and the emergence of the Internet has accelerated the use and development of this technology in everyday activities. It is estimated that over the next ten years, this technological leap will create nearly 100 million benefits for jobs, professions that we have not even heard of today. Scientists do not agree on whether human evolution will continue or not.

"For many years human evolution was looked on as sort of single-minded slog from primitiveness to perfection," says Dr. Ian Tattersall, curator emeritus of anthropology at the American Museum of Natural History. He argues that human evolution is already over.

Professor in the Faculty of Philosophy at Oxford University Swedish philosopher Nick Bostrom began thinking that humans will increasingly be cloned, artificial genetic modification, and the use of nanotechnologies. Under this scenario, the man of the future will be either a superwarrior or a superathlete, against whom the present man may appear very weak. And immortality will be sought by scanning every atom of the brain, in other words, the brain can be recorded on a computer that can live forever.

Anthropologist John Hawks believes that human evolution may resume when the colonization of other planets begins. On other planets man will be isolated and evolve to adapt to other worlds.

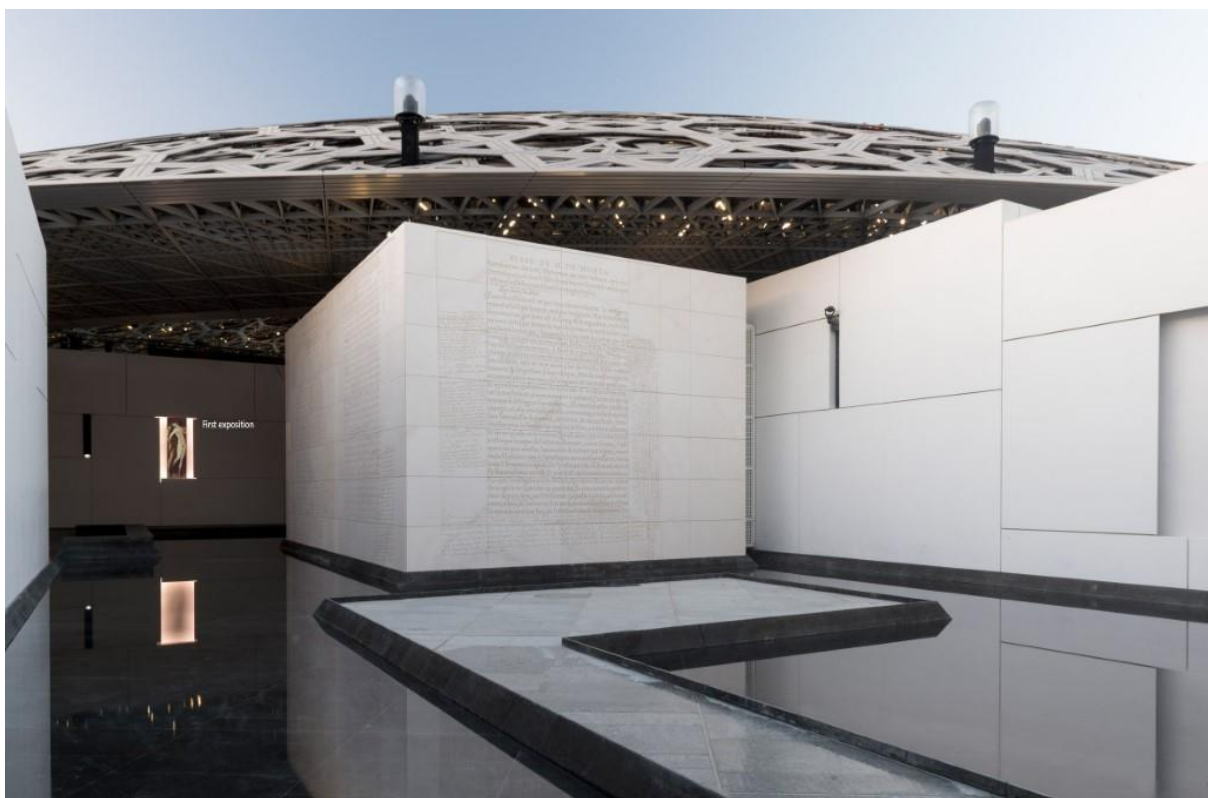

First exposition.

1. About the sin.

My first exhibit is the beautiful painting by Kees van Dongen "Adam et Eve" 1922. Kees van Dongen French artist known for his paintings of almond-eyed women and bourgeois leisure scenes but in the early 1900s his colours became more vivid and concentrated.

Adam and Eve were the first people to sin. Adam and Eve showed that they wanted to set the standards of good and evil for themselves. Such an act of them meant that they rejected the guidance of God. Adam and Eve sinned, so they began to get old and eventually died. They destroyed their friendship with God and lost perfect health and the opportunity to live forever. Now there are no sins, they become weaknesses this makes it easier to justify mistakes. Until a few decades ago, most people, faced with one or another emotional difficulty, first rushed to the church, went to the priest, or talked to God. Or maybe religion is evil? Modern man is increasingly choosing a psychologist's office. It is true that the virtues that determine spiritual and mental health — generosity, moderation, patience — are too awkward to consume, making it more convenient for us to pretend they don't exist. Without a man all material values are worthless, and man can give value to anyone or create something valuable (cultivate, master, produce). Do the future man will be spiritually perfect or not...

Kees van Dongen. Adam et Eve 1922

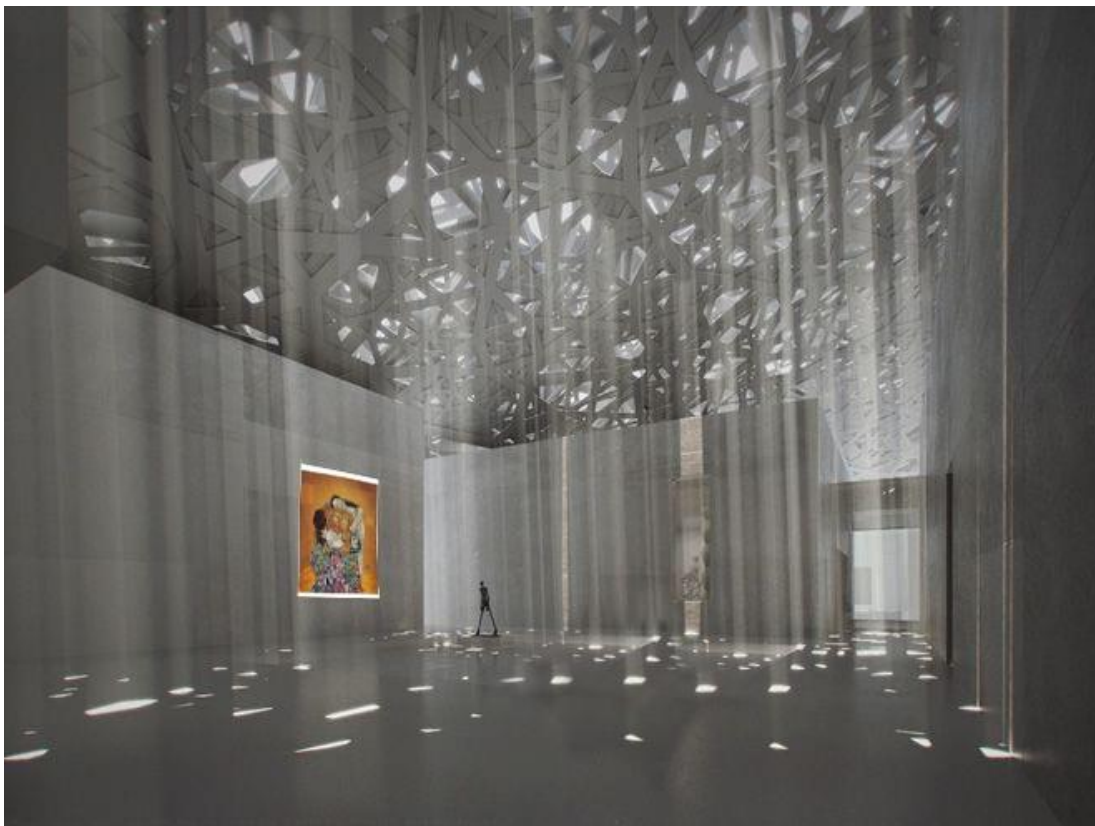

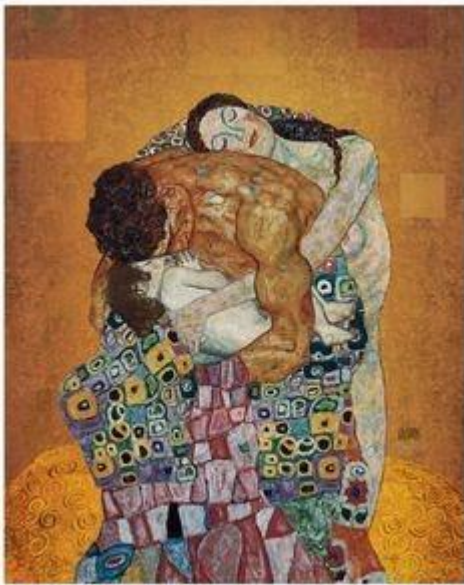

Second exposition.

2. About the love.

My second exhibit is the painting by Gustav Klimt "The Family"

We all become from women and men and we call it "family". If you were born that's mean you have mum and dad. How will the man of the future be born? The meaning of "family" becomes different these days how can be changed in the future? Most philosophers say that the purpose of life is to feel happy. And this is perceived as to love and be loved. However, the feeling is easier to experience than to describe ... Can robots and humans have children in common? This is no longer a matter of fiction, but research. In the future, the need for sexual intercourse between a man and a woman to extend the kinship will disappear, and machines and people will have offspring started together. Man is biologically programmed not only to reproduce but also to look for the best possible partner. Therefore, the latest advances in bionanotechnology and cell biology have proved noteworthy to researchers when it comes to a family extension. David Levy, one of the founders of the British company "Intelligent Toys", spoke of Love and Sex with Robots what the future family will be like, and whether people can have children with robots.

Gustav Klimt. The Family

Third exposition.

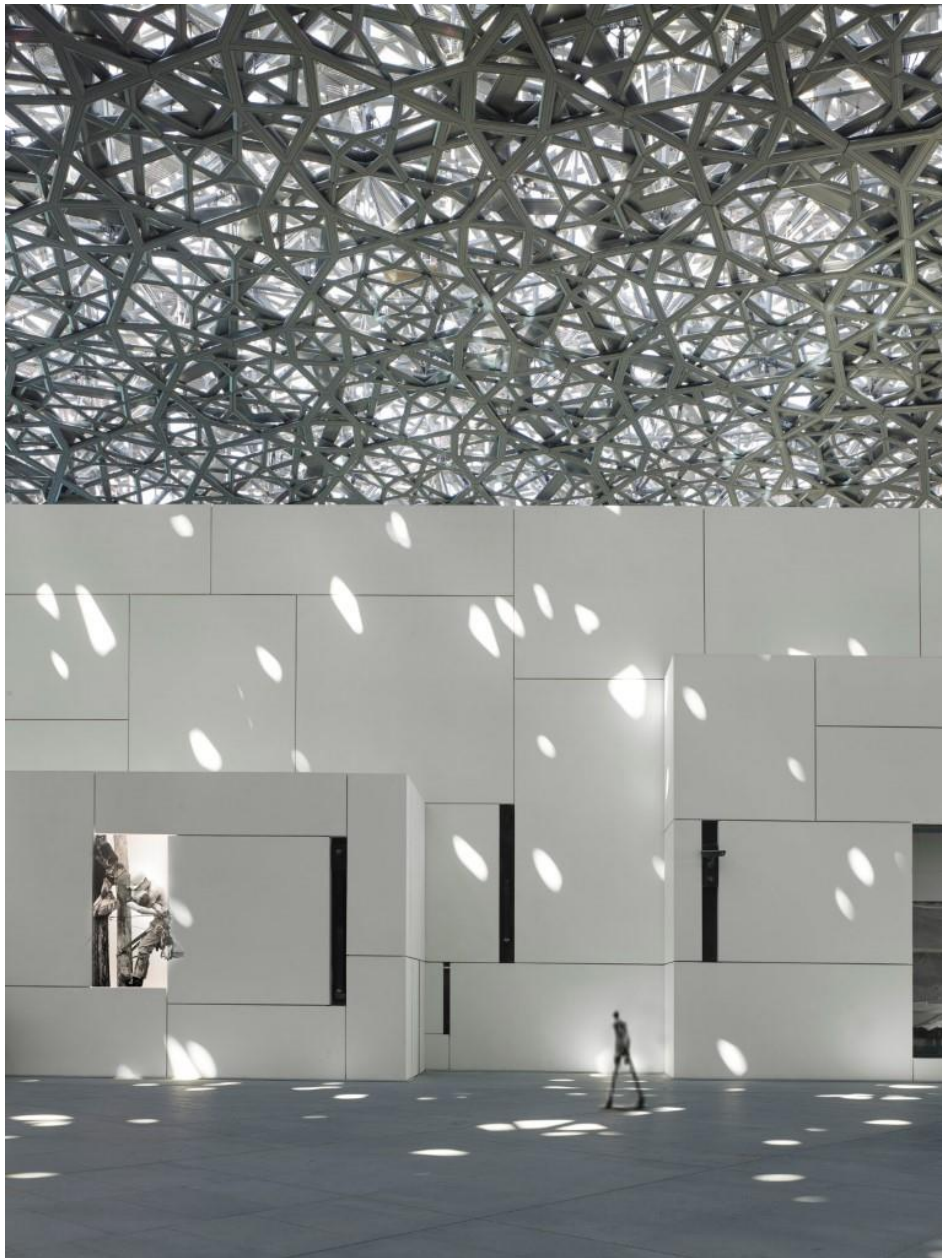

3. About a sacrifice and friendship.

My third exhibit is the photo by Rocco Morabito "The Kiss of Life" 1967. This photo shows a utility worker J.D. Thompson giving mouth-to-mouth to co-worker Randall G. Champion after he went unconscious after contact with a low voltage line. " They had been performing routine maintenance when Champion brushed one of the low voltage lines at the very top of the utility pole. His safety harness prevented a fall, and Thompson, who had been ascending below him, quickly reached him and performed mouth-to-mouth resuscitation. " (Author: Culture People. The Kiss of Life rarehistoricalphotos.com)

Will the bionic human have the same emotions as we have? Maybe most of the feelings will vanish with us... Robotics specialists have already developed a bionic human model with all artificial internal organs, blood from nanoparticles and mobile limbs. From it, it is possible to determine how the science of biomechanics will improve in the future and what opportunities it will provide for a person.

Rocco Morabito. The Kiss of Life 1967

Fourth exposition.

4. About the courageous people.

The photo was taken by Marc Riboud outside the Pentagon during the 1967 anti-Vietnam march. The photo shows an American young girl Jan Rose Kasmir protesting war with a flower. " Jan Rose Kasmir said: "It wasn't until I saw the impact of this photograph that I realized it wasn't only momentary folly – I was standing for something important." (Author: Behind the Image: Protesting the Vietnam War with a Flower www.magnumphotos.com)

Everyone knows that other people should not be killed, but sometimes wars break out, claiming thousands or even millions of lives. Why is this happening? I think it's a very difficult question. People have been at war for thousands of years. Sometimes because of economic gain or territories sometimes wars are caused by religious beliefs... When will man be enough?

Marc Riboud. *Protesting the Vietnam War with a Flower* 1967

Fifth exposition

5. About a sense of freedom.

The swing art installation by Ann Hamilton “The event of a Thread”. This is of memories to everyone who liked swings as a child. “And in the middle of it all, the curtain, which resembles a low-cost indoor version of Christo and Jean-Claude’s 1972 land art piece “Valley Curtain,” was doing its silent, discombobulated dance. In addition, if you paused in your swinging, you could feel the rest of the interconnected system pulse and gyrate, a momentary demonstration — at once silly and profound — that we are, indeed, all connected.” (Article title: The Audience as Art Movement. www.nytimes.com/2012/12/07)

The concept of freedom is broad and ambiguous. It is about political, legal, and religious freedom, as well as freedom of conscience, the press, and freedom of speech. These concepts refer to the great diversity of aspects of freedom and its wide application in a wide range of human activities.

We enter a wonderful world we meet each other and meet here - and we go together only for an instant. After that, we disappear from each other's eyes and disappear in the same way as we came here. We are on this earth only for an instant. We are flowing in time.

Ann Hamilton. The event of a Thread

My Imagine Exhibition "Kiss of the Life" is about what we all have and I am not sure that will be the same in the future so this is the very small thing that I would love to show to the future man. My Exhibition will be surrounded by beautiful and emotional classic music by Indiana University bohemian rhapsody. <https://www.youtube.com/watch?v=w0cLEvdyolw>

This is what you can't see can't touch but you can feel. The music you can understand in any language. Music is one of the branches of art, which is a special, intonation language, expresses the meanings relevant to a person, the essence of spiritual experiences.
