

LOCH NESS

HUMAN
CONSTRUCT OR
NATURAL
PHENOMENON?

A place visited by: Maria Morais

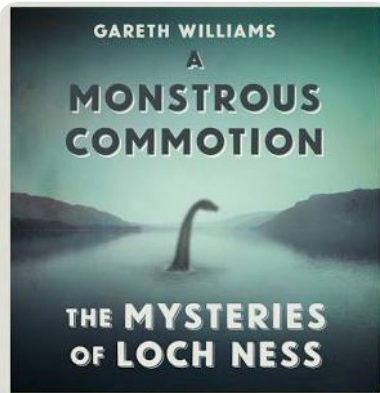

36.2 km long, Loch Ness' deepest point is 230 metres, making it the second deepest loch in Scotland after Loch Morar.

Loch Ness is known as the home of the Loch Ness Monster (also known as "Nessie"), a large unknown animal.

The first written account appears in a biography of St Columba from 565 AD

Popular interest and belief in the animal's existence have varied since it was first photographed in 1933

Loch Ness and Nessie were the protagonists of many books and films, and recently in 2017 was the setting for a six-part murder drama, in which a local detective is faced with the task of solving murders and catch a killer.

Water has the ability to carry, capture and create mythology in a landscape and the Loch Ness in Scotland is a good example of that.

Theodore Schwenk argued that **‘Water is the cosmic sense organ of the earth’**

Mircea Eliade said that **‘myths explained and justified the existence of the world, of mankind and of society’**

Back in 2017 I was leading a digital transformation project with a team of 18 software developers, and we had to spend 2 weeks in Scotland (including the weekend),

As we decided to visit Loch Ness during the weekend, I told them that we would be meeting Nessie! We were all very excited!

MYTH OR REALITY?
