

Creating hyperlinks for PowerPoint

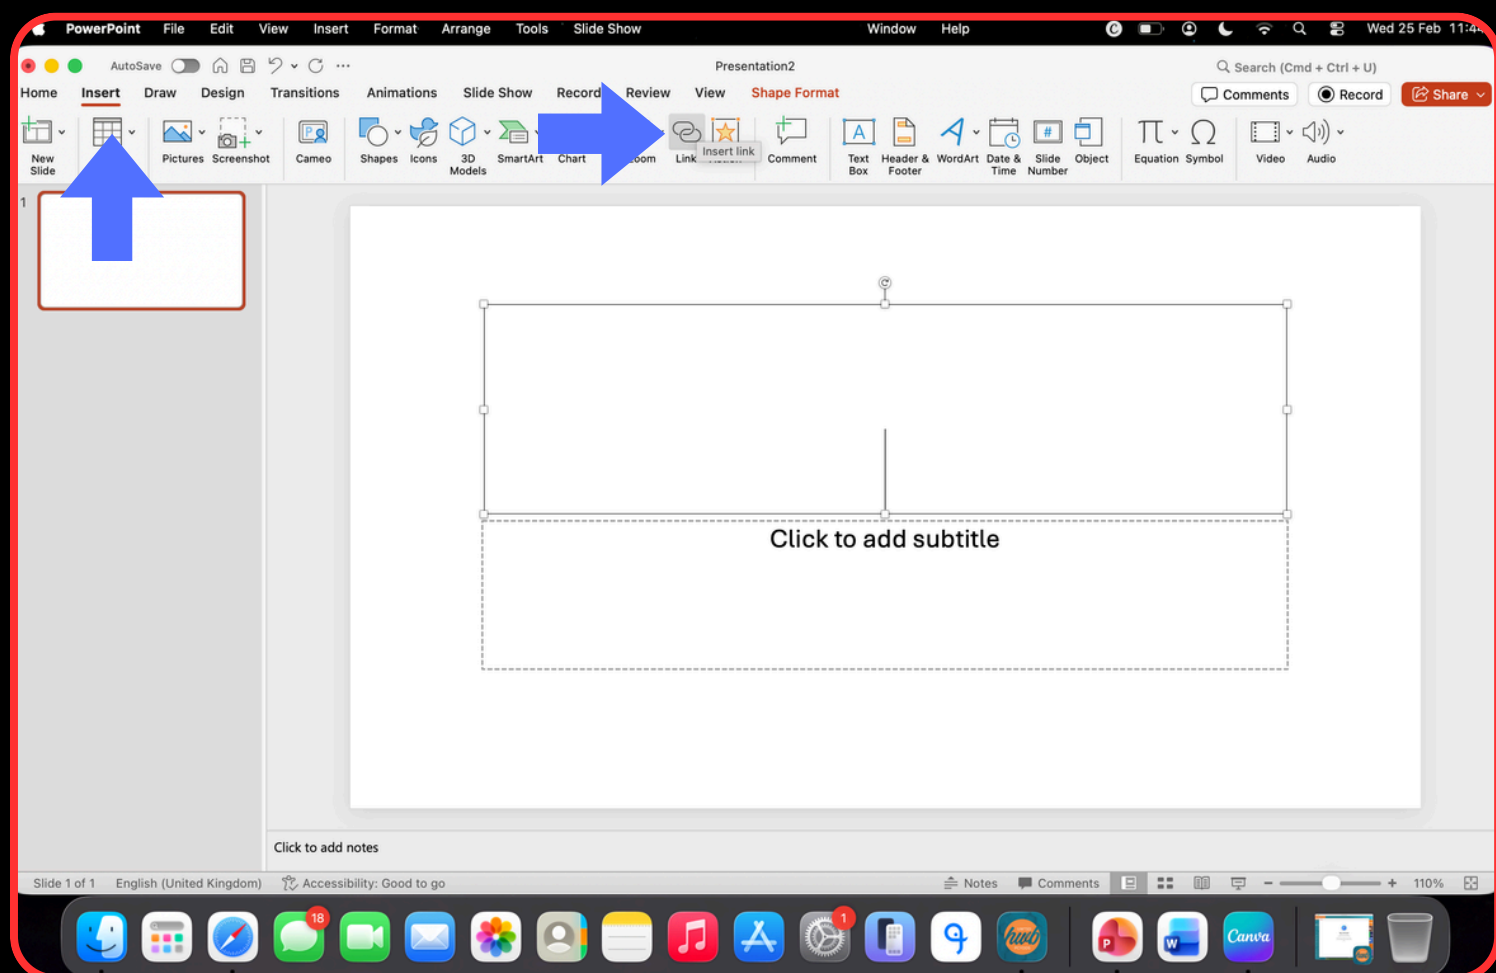

on Mac IOS

First navigate yourself to Powerpoint and open a slide I have found mine through my apps menu

1

Now navigate yourself to the insert option in the ribbon and then press link you will get a menu your goal to want to leave this open were going to come back to that in the next few steps

2

WHAT IS A HYPERLINK?

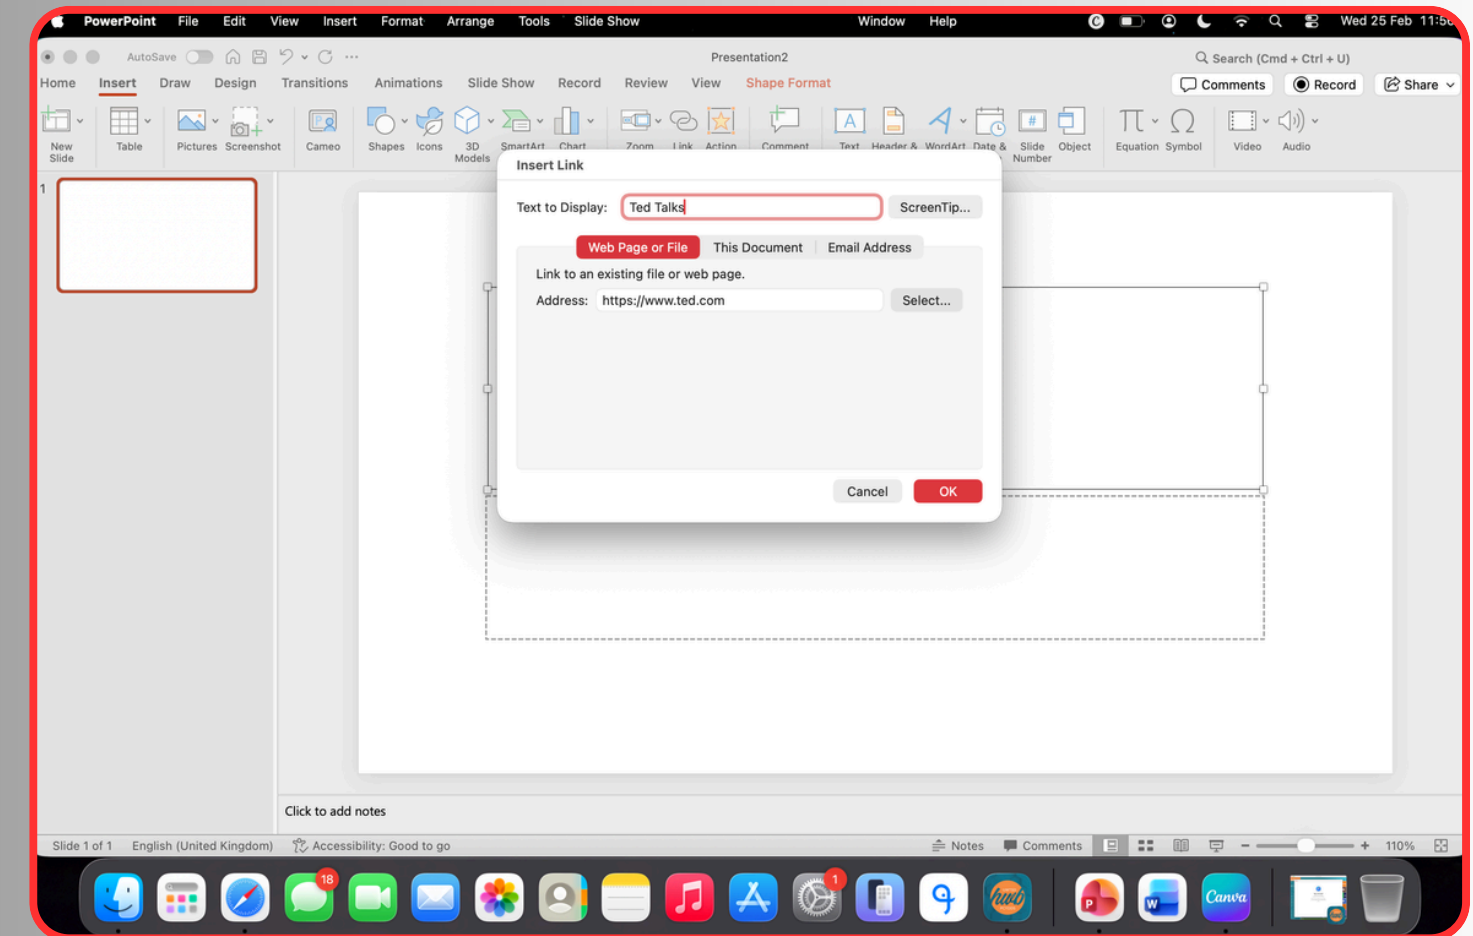

a hyper link is a clickable work, picture or icon that navigates you to a new location this location could be a website, video or even a file

BENEFITS OF A HYPERLINK?

A hyperlink boosts user experience, boost's SEO and enhances navigation. All while making your work look neater and more presentable

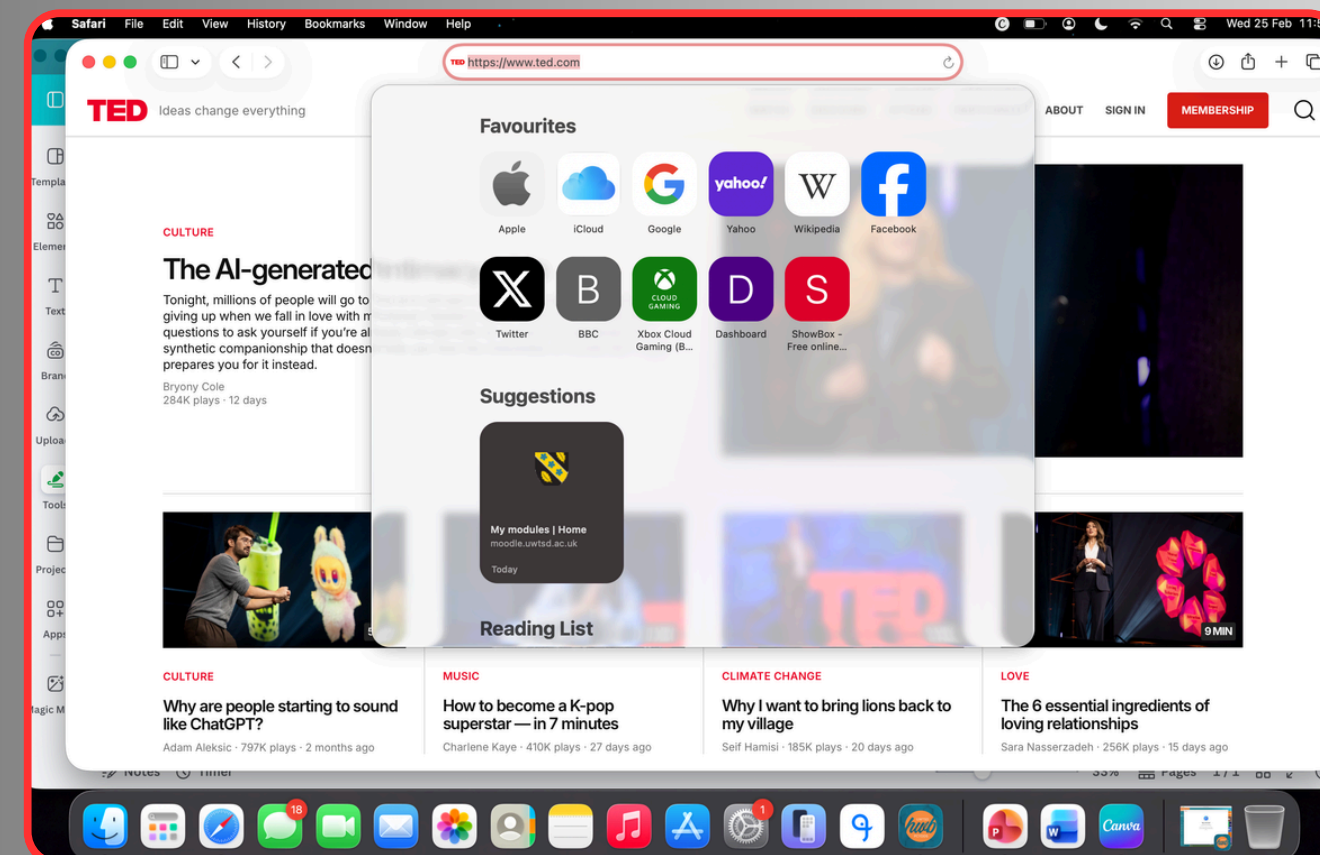

PRO TIP:

Always test your hyperlink in Slide Show mode to ensure it works correctly and directs users to the intended website or file without errors.

3

Now paste your link into the address tab (command+v) and write your text to display as what you would like your hyperlink to say and you're done

You're now going to copy the website link you want to create a hyperlink for you can achieve this by highlighting and pressing command+c
