
CASE STUDY PRESENTATION

Case study summary

- Ms A is a 35yr old woman
- Has numerous health conditions
- Allocated a social worker
- Evidence of a decline in her mental health
- Trauma from grief and breakdown within the family dynamic

RISK FACTORS

Moving out of the
family home

Homelessness

Death of brother

Inappropriate
relationships

HEALTH CONDITION RISK FACTORS

emotionally unstable
personality disorder

diabetes

Renal failure

Visual impairment

ETHICAL CONSIDERATIONS

- Was it appropriate in this case for Ms A to be encouraged to apply for housing to live alone
- Was Ms A given enough information before applying for council housing and given enough support with the housing application
- Was enough known about Ms A's medical conditions such as her mental health by the social worker that assessed her.

WHAT WOULD BE GOOD PRACTICE FOR THIS CASE STUDY

- Assessing if Ms A was capable of taking her medications and if not assigning someone to help her with medications
- Encouraging grief counselling because of the loss of brother
- Making Ms A's housing situation more of a priority
- Encourage counselling because of Ms A's decline in her mental health and more frequent assessments for her regarding mental health and health conditions
- Highlighting that professionals involved with Ms A should share information

CONCLUSION
