COMMUNICATION

My name is Gabriel Alexandru Rotaru and I present my report about history of Communication .

Communication is the process by which information is exchanged between individuals, communication it can be verbal and non-verbal . Communication is verbal when we use words and our voice to transmit a message , and non verbal when we use facial expression , eye contact , gestures to transmit a message .

The older methods of communication are from 3500 BC , when people used to communicate cave painting with graphic symbols like animals , trees , flowers. After people start to use smoke signals , people turn de fire on using damp grass wich couse a column of smoke to rise.

After the appearance of the first alphabet Phoenician alphabet in 1050 BC people start they began to communicate through text messages , they type a letter after send to consignee use carrier pigeons , until it appears postal system in 1653 a service this service has appeared for first time in India , China , Persia and Rome use horse drive by people to delivery the message , this phenomenon giving rise to newspaper in 1440 made by German Johannes Gutenberg , one tool of mass communication . I use every each month post mail to send invoices to my parteners and i check newspaper for the most new information from the world .

In 1830 nonverbal communication has begun to evolve , because was invented electric telegraph , by Henry Morse wich use Morse code , one instrument what can send a messagge over a long distance and more fast . People start to focus on the verbal communication what was more easy and more fast appears the landline phone in 1876 Invented by Alexander Graham Bell , a device that allowed people to communicate verbally from a great distance live . I use land mobile when i am at office to contact the people on the ground.

After the phone appears in San Francisco on 7 September Philo Taylor Farmsworth invent Television , an audio-video communication channel that it can send the information live .

In 1973 Motorola created first mobile phone , one divice what change communication forever , easy to use having a numeric keyboard with was a portable phone , that it allowed people to contact other people wherever they are , by voice calls, records or text messages. I use every day mobile phone to contact my customer , mobile phone help me to find a way to delivery a parcel when customer is not home or adress in wrong ,

In 1983 the internet has appeared a global system of interconnected devices what use Internet Protocol Suite , to communicate between networks. Internet offered to the people a space to open social , shopping and media platforms, a lot of shops and newspaper brands moving on the internet . Internet offer people the most fast way of communication , and research .

The most fast way of communication on the Internet is the Electronic Mail introduced in 1991 and first using in army and in the educational system , a letter in the electronic format , you can send instant a letter type on the mobile phone to the consignee using email , all you need to do is to create a account on the email platform . I use email to respond to the complain and to send fast letter to my friends .

All this things gave birth to the Wearable Technology , small smart device , what offer user all features of a mobile phone , which can only be controlled by voice command .

At the moment the most used way of communication is video call because offer people possibility to talk and see with other live , from a long distance , video call can be made from the mobile phone or smartwatch or smart camera .
