

NHS Wales A&E Waiting Time Statistics

Chart showing the total attendances in each area from June 2019 to August 2019

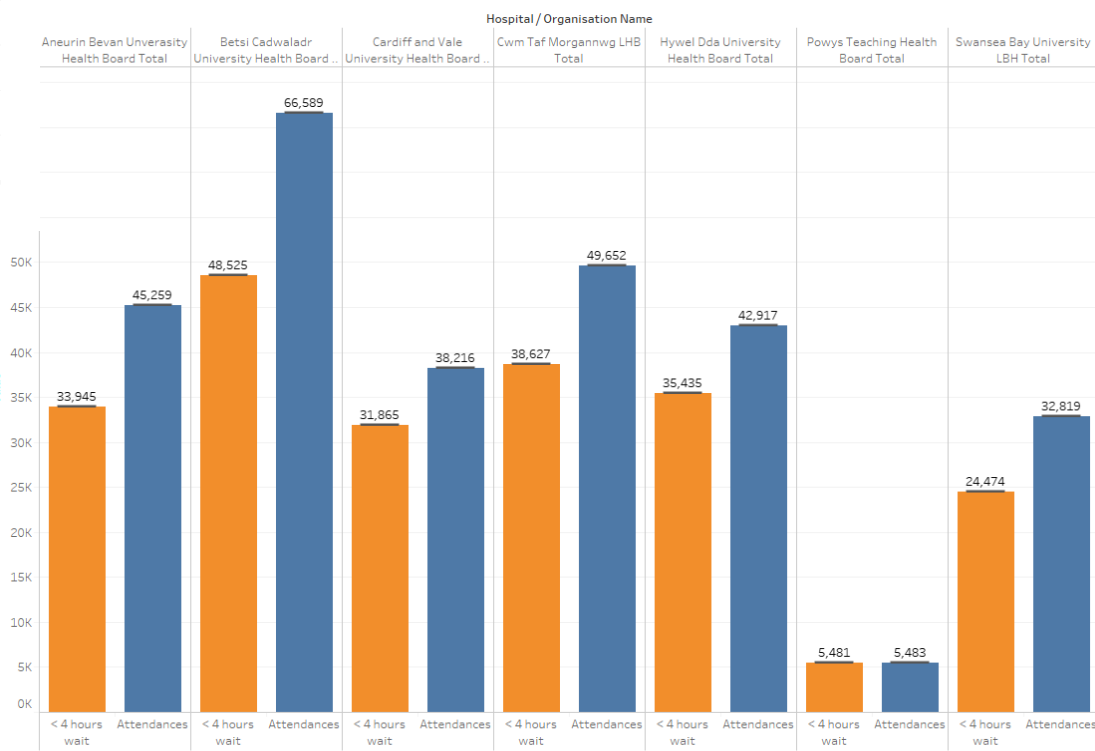

This chart demonstrates the total amount of attendances in each area. It is apparent that Betsi Cadwaladr University Health Board has the most attendances, with Powys Teaching Health Board having the least, due to only having one MIU facility. It seems that throughout Wales, July 2019 seems to have the most attendances, as shown by the annotations.

Red- August 2019

Yellow- July 2019

Green- June 2019

Correlation between Shorter waiting times and less attendances

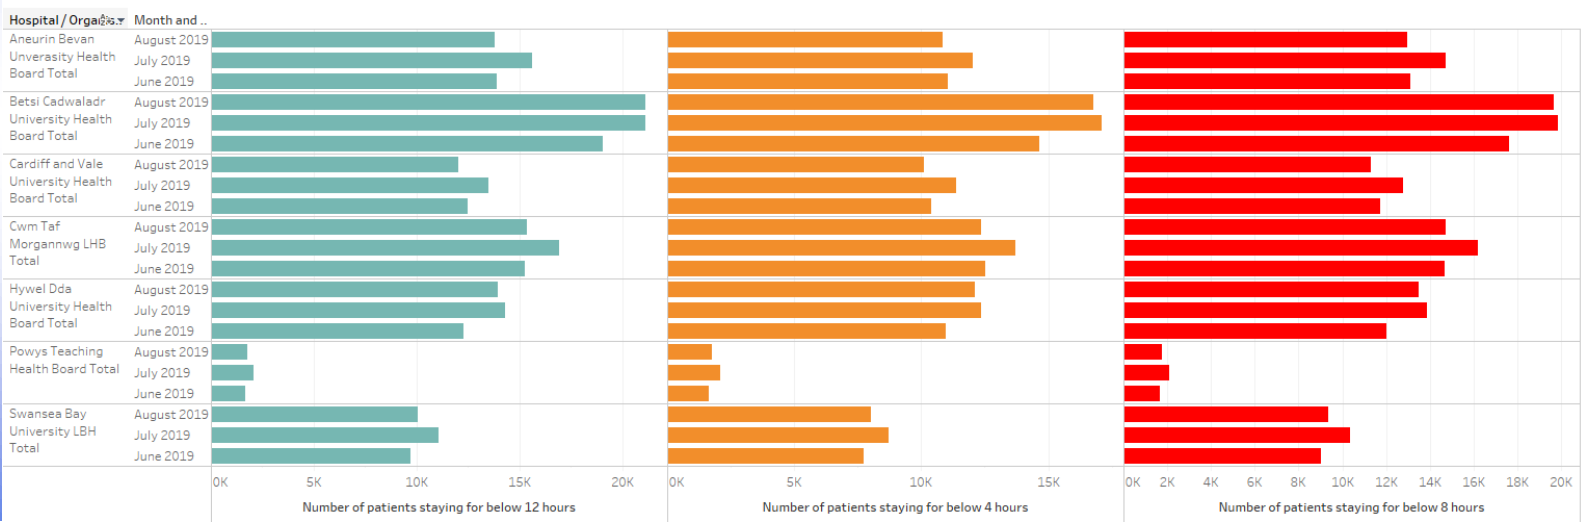

The following chart demonstrates a correlation between shorter waiting times and less attendances. There is a clear correlation between the two factors when looking at the Powys statistic, seeing that the MIU facility only handles minor injuries, which can quite easily be resolved in less than four hours. For the most part, there is still a correlation between the other boards' statistics as well, seeing as clearly more than half of all attendances in every board has been resolved before reaching the four-hour threshold. In short, less attendances do mean shorter waiting times. This also clearly shows with health boards have the shortest waiting times. Excluding the Powys area because of its single MIU, the area with the relatively shortest waiting times is Swansea Bay.

Blue – no. of attendances

Yellow- no. of patients waiting for less than 4 hours

Chart showing the amount for patients who stayed for 4, 8 and 12 hours, respectively

This chart demonstrates each of the health boards' statistics for the number of individuals who have waited 4, 8 and 12 hours respectively throughout the period of three months. The Betsi Cadwaladr University Health Board visibly has the highest numbers in all three categories, throughout all three months. This is because of the amount of facilities in this region, with longer waiting times usually associated with the hospitals.

Chart showing the amount of people waiting for more than 12 hours in each health board area

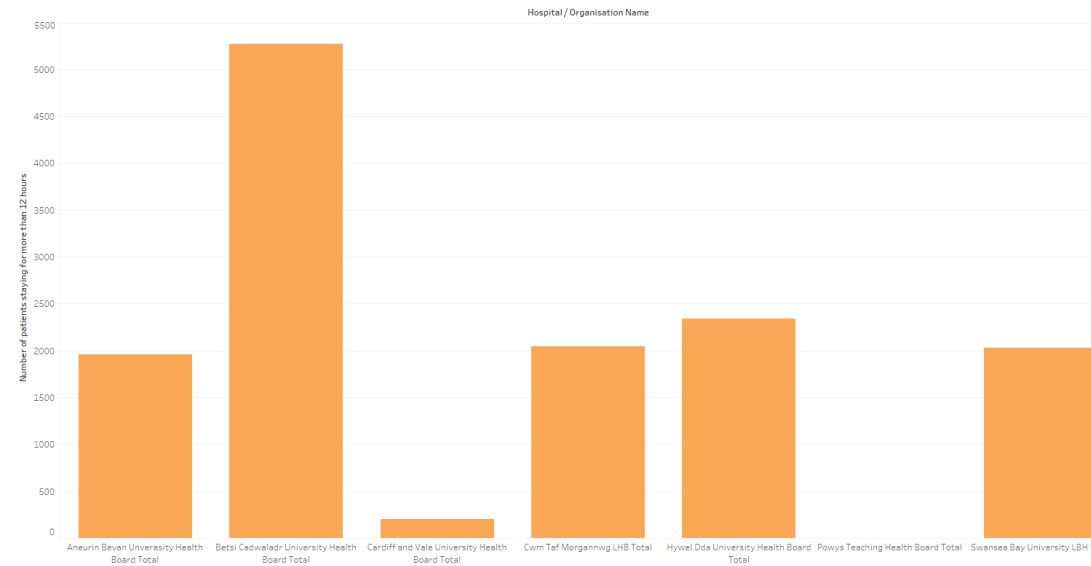

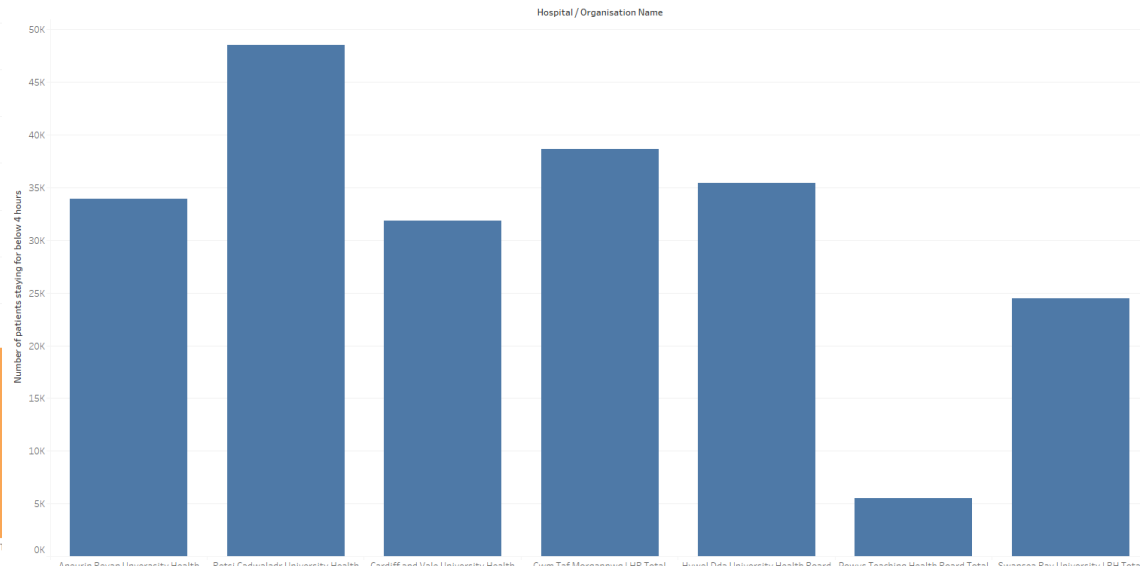

Chart showing waiting times of less than four hours in each health board area

This chart shows the total amount of people that have waited for more than 12 hours in each health board area. It is evident that Betsi Cadwaladr Health Board also has the highest statistic in this chart with more than 5000 individuals, so it is particularly likely that individual would have to wait more than 12 hours in that area. Once again, disregarding the Powys area, the Cardiff and Vale University Health Board are the lowest.

And finally, this chart shows the health board areas with the most waiting times that last below 4 hours. Unsurprisingly, Betsi Cadwaladr Health Board also excels in this category, whilst other health boards have less due to them having less facilities. It should be noted that the Powys area is shown, but it only has a single MIU, so waiting for more than 4 hours is an unlikely scenario.
