

-BASIC DIGITAL SAFETY-

(Lets make our online life safer)

- When you make a profile somewhere make sure to have a unique password. Do not use personal data such as your date of birth. Make it longer and with specific symbols (£ , @) like those

- Put two factors authentication
This means that you can also put a second password or bio data for example face id or finger print with them it will be much harder for the hackers to get to your profile or device

- Most of the viruses go through links be careful what you open if it looks suspicious to you do not open it nowadays most of the hackers send links and present them like it is from your bank when you open if you are hacked
