Comments:

Aims & Objectives should be discussed first.
Highlight the key findings from lit. review
missing critical evaluation of the findings.
Jumped straight into experiment. makes it
difficult to ~~understand~~ follow.

Explained the experiment setup and
results well. more explanation on phase/test would be ^{good}
missing evaluation of results against lit.
review findings.

Reasonably done well on response to
questions.

If discussion on background research / findings
were included could have been better viva.
