

HOW TO PROTECT YOURSELF FROM HACKERS

THE NEW EGE OF INTERNET

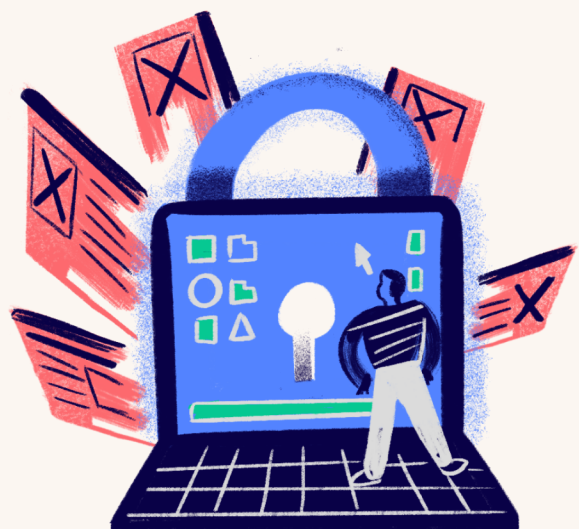

Technological evolution

Every day the number of people using the internet is increasing. Millions, billions of personal information are shared every day. As technology evolves, so do hackers.

Investment in security

The first most important point is to install anti-virus program. It is true, the family budget has decreased, but you are buying peace of mind regarding personal data.

Be cautious and informed

Protect your personal data - minimal information.

Privacy Settings - on accounts avoid sharing information.

Be careful when sharing your data with institutions.

Become critical

About the Domain names - You must be checking.

The website - You must be checking.

Spot information.

Check a website
