To protect against scams, be cautious of unexpected communications, monitor your financial accounts, and never share personal details through suspicious links or calls. You can also report scams to relevant authorities like Action Fraud or your bank.

General protection

Be skeptical: Treat unexpected emails, calls, and text messages with caution. A genuine organization will not pressure you to act immediately.

Use secure payment methods: When shopping online, use secure payment options and only purchase from trusted retailers.

Create strong passwords: Use a combination of three random words with capital letters and numbers. Avoid using personal information.

Check credit reports: Regularly obtain and review your credit file for any unfamiliar entries.

Financial protection

Monitor accounts: Regularly check your bank and credit card statements for unusual activity.

Protect your bank details: Be wary of emails or other messages asking you to click a link to confirm bank details.

Report fraud: If you think you've been scammed, contact your bank immediately and report it to Action Fraud (in England, Wales, and Northern Ireland).

Online and technology protection

Use caller ID and spam protection: Enable features on your phone to block spam calls.

Be careful on social media: Be cautious when meeting people on dating apps or social media, as some individuals may be scammers.

Research unfamiliar businesses: If you're considering an overseas firm, check its regulatory status. You can also check a company's official website for a list of authorized sellers.
