

Performance Comparison of Both Type-1 And Type-2 Hypervisors Used Within The I.T Industry

Stephen Edward Bentley, P133367, University of Wales Trinity Saint David, B.Sc Computer Networks, sbentley.133367@student.uwtsd.ac.uk

1. Introduction

The project chosen is going to be based around both types of Hypervisors and how best to perform a detailed performance comparison between both types. Testing would be undertaken to offer a performance comparison which shall offer result's to fully compare. It shall be explained what a hypervisor is, what they do, what different types are available and how they are used within the information technology industry. Hypervisors and virtualization are used throughout industry whether in an office, helpdesk or within a cloud environment.
