Introduction

The Digital devices general it is used by everyone now , it can help you a lot now , and can help you safe time aswell , before we had the Internet , we had to go to library read books and search for information, but now you only have to go to Google and look for what you need information about, but every single time you search for somomething it leaves footprint that can be tracked.

How to protect your Digital devices from virus?

You can protect them by installing an Anti-virus program in every single device that you have, some of them will have a charge but that can help you safe a lot a money and can prevent the virus to attack your devices, sometimes it can even stop your device to work. **Also**, when you create an account you can create a strong password, it prevents from hackers to
