

KEN PEARCE

designer. creator. maker.

EXPERIENCE

CREATIVE DIRECTOR

Nuclear Family Records

September 2017 - October 2019

I previously co-ran an independent record label in South Wales. My role mainly consisted of graphic design; creating event posters, band merch, promotional artwork, band logos, and cassette tape covers. I was heavily involved with organizing shows, event promotion, online sales, and social media management.

PRINT SPECIALIST

Office Outlet & Staples

October 2015 - June 2019

I started working at Staples as a Copy & Print Associate, I expanded my knowledge with printing and creating custom promotional products. I handled client requests daily and delivered a personalized high-quality experience. I also was responsible for fixing and maintaining the equipment used. I was promoted to Print Specialist at Staples. Additional responsibilities then included managing staff, hitting sales targets, meeting high priority clients, and ensuring the department is kept up to date and in excellent condition.

LARGE FORMAT PRINT TECHNICIAN

Gardners

October 2016 - September 2017

At Gardners, I was required to use wide format printers to produce billboards, signage, banners and other bespoke advertisements in a fast-paced environment. This included setting up the artwork using computer software; making sure the size, layout, colour and other properties match the customer's requirement. I carried out daily maintenance on the printers and equipment to ensure they are running efficiently, which involved the safe handling of solvents and other chemicals.

EDUCATION

UNIVERSITY OF WALES TRINITY SAINT DAVID

BSc Product Design & Technology

Class of 2020

During my time at University, I focused a lot on technical product design using digital sketches, 3D computer aided design and rapid prototyping methods to complete assignments. I experienced working for live clients both individually and collaboratively with other students, this included Orangebox, the Welsh Rugby Union and Recliners. My technical knowledge and experience aided me in setting up the University equipment like computers, 3D printers and vinyl cutters. Within my free time I managed to design, build and modify multiple 3D printers.
