Buy 10 Mac Studios or this one Macintosh Colour Classic

Someone bought a brand-new Apple Macintosh Color Classic in the early 1990s, and you could use it. In 1993, Danielle De Iuliiss came out with the Macintosh Color Classic. It looked like the first Mac, but it had a colour screen and cost \$1,400, which is about \$2,887 today (AppleInsider, 2022).

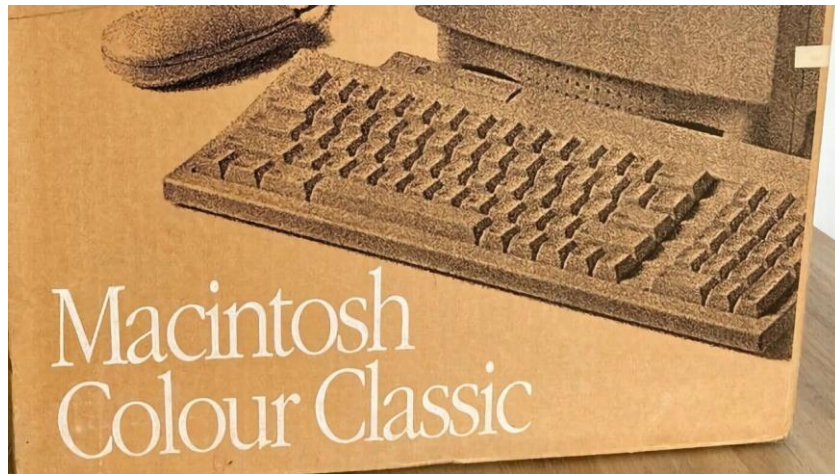

Figure 1-Macintosh Color Classic (Butts, 2022)

On eBay, one costs \$19,995 plus shipping. That's six times the price it was at first. It costs \$1999 for Mac Studio. (without the cost of delivery). Advertisement: "Client brought back this brand-new PC. " The guy was never seen or touched again. "After that, he lost clients (Butts, 2022). The screen on a 10" Sony Trinitron has 512 by 384 pixels. The version has a Motorola 68030 CPU and an ADB Apple Keyboard II. Almost certainly, a brand-new Color Classic will have a hard drive with about 40 MB of space. It says "Colour Classic" on the front, and the Return key is bigger than on US keyboards.

Always on Display can now have its settings customized on the iPhone 14 Pro thanks to iOS 16.2.

Figure 2-iPhone 14 (Damayanti, Wulandari and Wu, 2020).

In iOS 16.2 beta 3, Apple gave the iPhone 14 Pro options for a screen that stays on all the time. The feature can only be turned on or off on the newest iPhones. The latest beta version of iOS 16.2, which came out on Tuesday, has switches to turn off the background and warnings when the screen is always on. Always On Display can now be changed in iOS 16.2 beta 3 (Damayanti, Wulandari and Wu, 2020).

On your iOS 16.2 beta 3 iPhone 14 Pro or iPhone 14 Pro Max, go to Settings > Display & Brightness > Always On Display. Background and notifications are two of the new toggles. First, turn off the background picture for the Always On Display. The time and unread notifications will show up on a dark background to save power. If you don't want “always on notifications,” turn off the second choice. There are still Lock Screen widgets you can use.

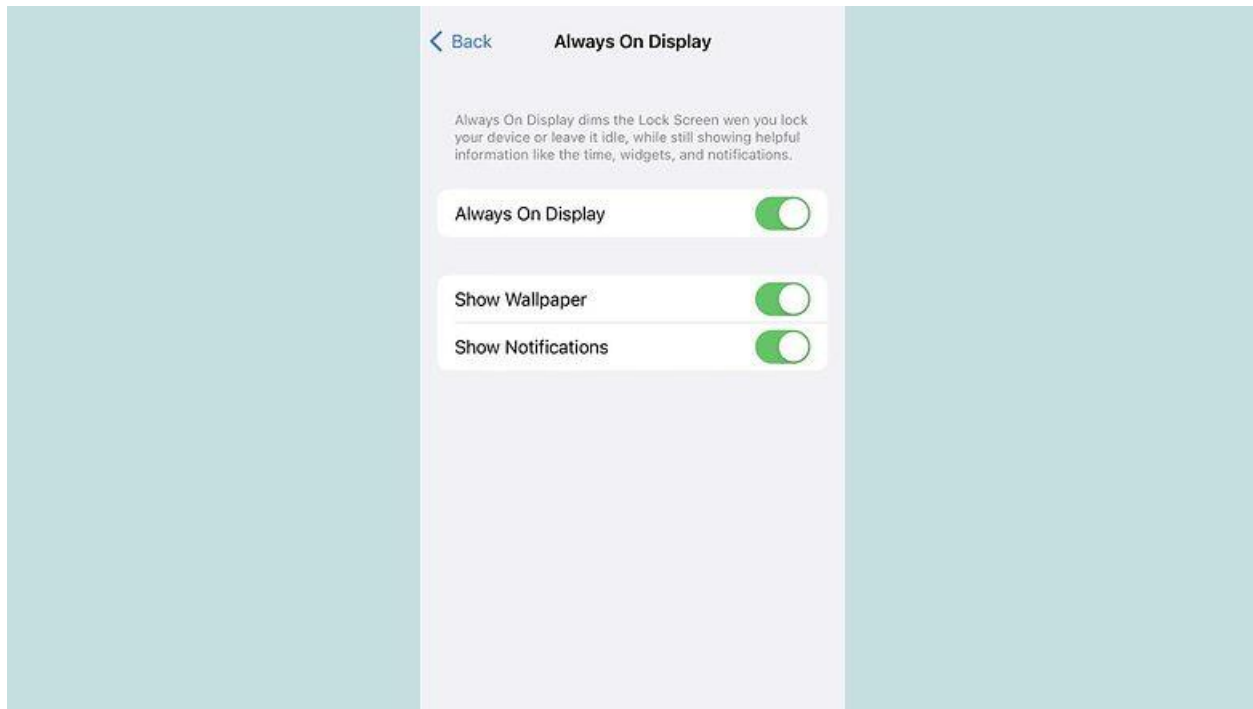

Figure 3-Display Settings (Butts, 2022)

Customers and journalists have said that the Constantly Displayed on the Apple iPhone 14 Pro is a bad thing. Even though the screen was always on, many people said it was too bright. In this mode, Apple doesn't offer customization options as Android does.

High-end Android phones with an always-on display let you choose when it turns on and off, the background, and more. Before the iPhone 14 Pro comes out, Apple might change the way Always on Display works. Since the iPhone 14 Pro, Apple hasn't changed the Constant on Display. In future iOS releases, the company may change the way it works.

If you're not in the iOS 16 beta program, you'll have to wait until iOS 16.2 to use the new setup options.

These iPhone Apps Offer Live Notifications for Sports, Parking, Flights, and More

In September, iOS 16.1 made it possible for third-party Live Activities apps to work with it. iPhone users can watch live events from the Lock Screen or Dynamic Island.

Figure 4-IOS 16 Features (Harland and Uddin, 2014).

Live Activities are real-time alerts that show up on the Lock Screen of an iPhone. On the iPhone 14 Pro and 14 Pro Max, Dynamic Island shows live Activities. When you hold a Live Activity on Dynamic Island, the information about it is shown (Harland and Uddin, 2014).

Apple's Live Activities feature will be useful for at least one of the many iPhone apps that support it.

FotMob

With the FotMob app, you can keep track of the World Cup in Qatar. Start up FotMob, look for a current match, and tap the heart icon (Holahan, Sullivan and Markham, 2013). The scoreboard is shown in real time on Lock Screen and Dynamic Island.

Warnings in Sports

Sports Alerts

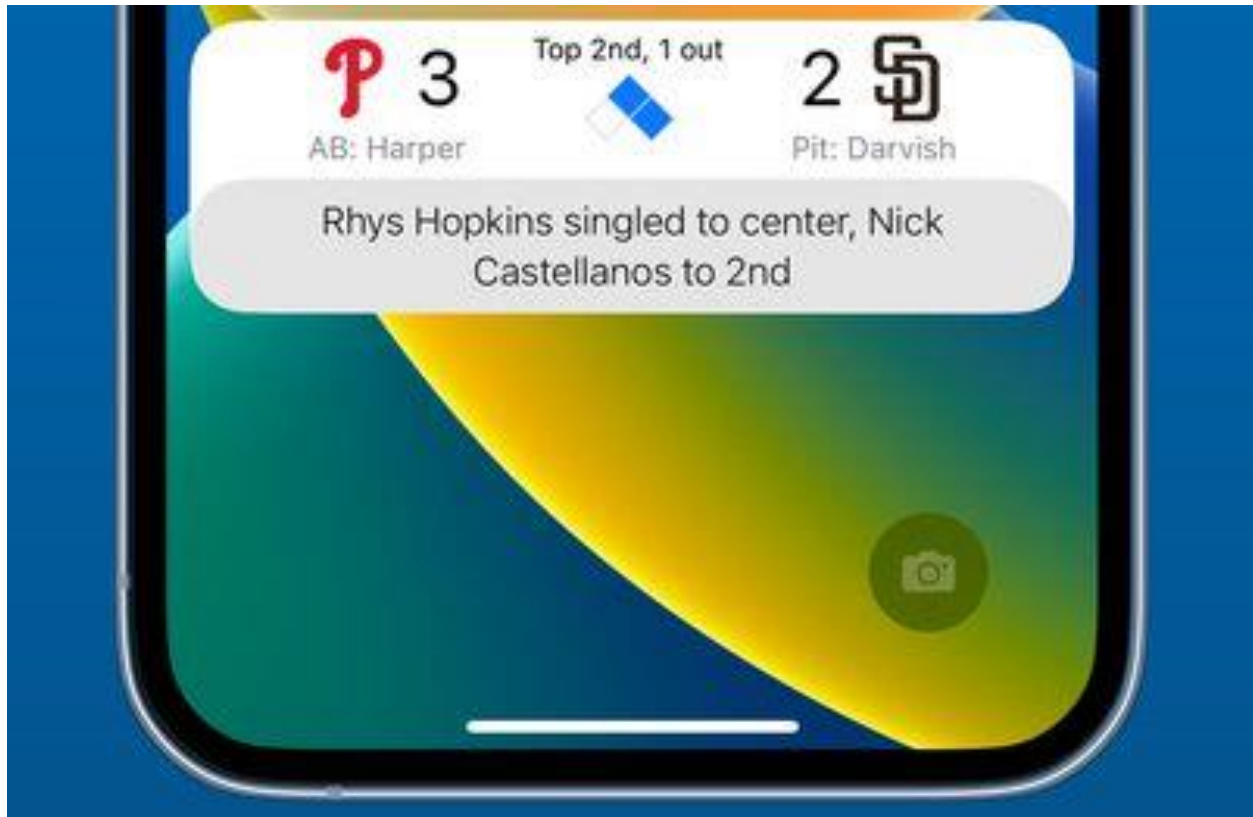

Figure 5-Apple Alert (Kumar and Kutlu, 2015)

Beyond the World Cup, the [Sports Alerts app](#) can be used to track live scores from many other sports tournaments, including the NFL, MLB, NBA, NHL, and NCAA football and basketball. To do so, open the Sports Alert app, tap on an ongoing game, tap on the three dots in the top-right corner, and select Start Live Activity (Kumar and Kutlu, 2015). This will result in a live scoreboard appearing on the Lock Screen and Dynamic Island with play-by-play action.

Why I'm thankful for Universal Control on my Mac and iPad

At first, I didn't understand how to use Universal Control for macOS Monterey and iPadOS 15. Even though no one had asked for it, Apple gave it to them because it could be useful. I liked how high-tech it was. Will it work? I questioned (Levy and Smets, 2010). Universal Control has been out for about eight months, so I can tell you what I think about it. (It came out in March 2021 after being announced in June 2021.) Amazing. I think it's a better OS than what came before. I'm using it in ways I never would have thought of. I admire UC because...

iPad Workstation Since the summer, I've been using my iPad at work. When I first had this problem, I was using Picture-in-Picture on my Mac to watch a live baseball game or NASA TV event (Loda, 2014). I had to move apps out of the way, and sometimes I forgot Safari was still playing and closed the tab. Then I realized I could put my iPad on my desk and watch the movie there. Universal Control makes it easier for Sidecar to use an iPad as a Mac display.

Apple

Figure 6-I Mac Home Page (Loda, 2014)

Once everything was set up, I just swept my trackpad across the Mac screen and onto my iPad to move my cursor (Loda, 2014). Since I didn't have an iPad on my desk, I never thought to use Universal Control. I could use the apps on the iPad without taking my hands off the keyboard tray. With Sidecar, a feature of macOS, you can use your iPad as a second screen. I like Universal Control. My iPad is mostly used for apps that are made for it. I can open Safari on my iPad without using Sidecar and dragging a Safari window onto the screen. I can do this with Universal Control. It didn't take me long to figure out that I could use my iPad as a second screen for my calendar, Twitter, Slack, or Discord. Unlike Sidecar, this strategy made sense. Surprisingly, Universal Control has some cool new ideas. This feature lets you copy, paste, drag and drop, and use the same keyboard and trackpad on multiple devices (Macworld, 2022). Apple's interoperability features, like AirDrop and Shared Clipboard, are being used in the background. The pointer support that Apple will add in 2020 is important to this ability.

Even though I knew this, I was surprised by a recent thrill. The last few months were spent updating my book about Apple's Photos software. I had to compare Photos on the Mac, iOS, and iPadOS regularly. Since I can use the same keyboard and touchpad on both my Mac and my iPad, it's easier to compare the two versions of Photos. Then, "aha!" I used the iPad's camera to take a screenshot, which turned out to be a clear rectangle. You can change, delete, save, or copy a screenshot by touching the floating rectangle. To save the picture to your gallery, swipe away from the floating rectangle.

Amazon Offers Almost 20% Off Apple AirTag, More Deals

We still keep an eye on early Black Friday sales. You might find good deals before Thanksgiving. Today's deals include Apple AirTag four-packs, Logitech Blue Yeti mics, and more. The Apple AirTag discount on Amazon could help family and friends keep track of their things. Apple's airbag is a great way to find things. Even if the price isn't bad, it's still a lot of money. It's not much to pay \$25–\$30 for lost luggage, keys, etc (Osaremen, 2019).

The cheapest four-pack of Apple AirTags we could find was on Amazon. The online store took 19% off of the \$99. \$79.98 until there are no more left. Each airbag costs \$24.99. This is a 14% savings. Between December 2 and 4, Prime members can get free location trackers. Give content creation Deals on Logitech for Creators can be found on Amazon. Since the accessories company bought Blue, it has become one of the best USB microphone suppliers. Here are the deals on Blue mics that Amazon has for Black Friday (Pratiwi, 2017).

The \$40 is saved with the Logitech Blue Yeti Game Streaming Kit. You get a Blue Yeti USB Gaming Mic, a Blue Pop Filter, and software. \$139.99 now \$99.99 The \$40 discount is on the Blue Yeti USB microphone, which is great for live streaming, podcasting, and more. It used to cost \$129.99, but Amazon now sells it for \$89.99 (www.cultofmac.com, 2022). The Blue Snowball is an attractive microphone for beginners that is of decent quality. Amazon gives a 20% discount on a gem that was already cheap. Now, Blue Snowball costs \$39.99.

As of February 1, 2023, thanks to an announcement from Apple and Major League Soccer, fans can purchase an MLS Season Pass.

Figure 7-Latest Apple Features (Zhang, Basadur and Schmidt, 2014)

Apple and Major League Soccer will launch MLS Season Pass on February 1, 2023. This will be the first subscription service of its kind, and it will make every regular season, playoff, and Leagues Cup1 game available live to fans in 100+ nations without any blackouts. Apple will be the exclusive provider of the MLS Season Pass. With the MLS Season Pass, the league will be able to reach fans all over the world (Zhang, Basadur and Schmidt, 2014). All of the games will be available on tv.apple.com, Apple smartphones, Apple smart TVs, Apple streaming devices, Apple set-top boxes, Apple game consoles, and Apple smart TVs. With the release of MLS Season Pass, MLS and Apple have agreed to work together for 10 years.

St. Louis CITY SC (2023) showed off their jerseys for the 2023 season, which include an Apple TV patch on the sleeve. All 29 teams will wear jerseys with an Apple TV patch in the weeks leading up to the 2023 regular season (Butts, 2022). Apple's senior vice president of services, Eddy Cue, said, "There's no better time to launch MLS Season Pass" because of the recent MLS Cup

and the fact that the league is the fastest-growing soccer competition in the world. When the MLS Season Pass goes global in 2023, fans won't have to worry about being shut out.

"We couldn't be happier to give our fans a new place to watch all MLS games and exclusive league and club programming," said MLS Commissioner Don Garber. "Our fans are the most involved and passionate in all of the sports," MLS said. On the MLS Season Pass, fans will be able to watch Every MLS match and League Cup final, plus thousands of MLS NEXT Pro and MLS NEXT games This gives fans the most complete TV schedule ever. MLS Season Pass includes a live match whip-around so fans don't miss a goal, save, or comment. Apple TV app subscribers may acquire MLS Season Pass for \$14.99/month or \$99/season. Apple TV+ is \$12.99/month or \$79.99/season.

Emergency SOS via satellite is available today on the iPhone 14 lineup in the US and Canada

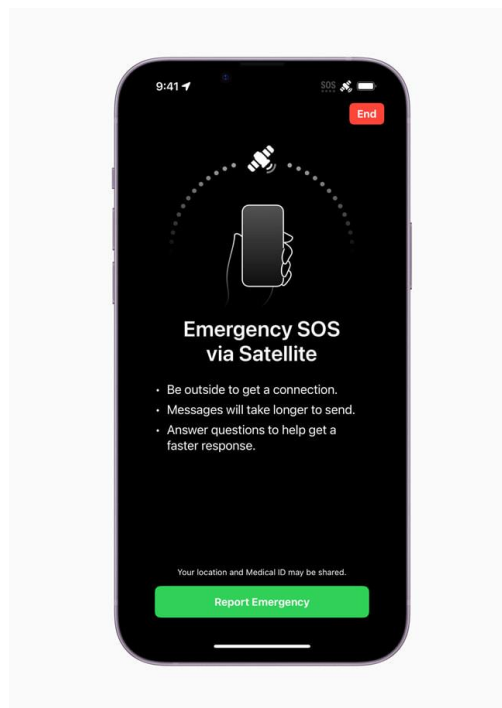

Figure 8-iPhone Emergency Features (Harland and Uddin, 2014)

Cupertino's CERTAIN The U.S. and Canada can now use the Emergency SOS service from Apple. All 14th-generation iPhones have this ground-breaking feature, which lets users text emergency

services even when they are not in a cell phone or Wi-Fi range (Harland and Uddin, 2014). Users can now use the Find My app to tell satellites where they are when they are not online. On November 15, both the US and Canada will be able to use Emergency SOS via satellite. In December, France, Germany, Ireland, and the UK will be able to use the service.

Most popular places are out in the middle of nowhere and don't have good phone service. Apple's SVP of international marketing, Greg Joswiak, said that the iPhone 14 series with Emergency SOS through satellite is a very important tool. To build this service, our teams had to deal with a unique set of technical problems (Holahan, Sullivan and Markham, 2013). This satellite-based Emergency SOS feature is new to the iPhone 14 series and is meant to make people feel better in an emergency.

The iPhone 14, 14 Plus, 14 Pro, and 14 Pro Max can connect directly to satellites because they use technology and software made by Apple. Connecting to a satellite through Emergency SOS adds to the iPhone's existing features like Emergency SOS, Medical ID, emergency contacts, and Find My Location sharing (Levy and Smets, 2010). This makes it easier to get important information to people in an emergency. This new technology lets PSAPs talk to more people in emergencies without needing more equipment, software, or rules. Users can be connected to PSAPs that can receive text messages or relay centres with Apple-trained emergency specialists who can call PSAPs on the user's behalf.

Emergency SOS, which works with satellites, saves lives. The head of the California Governor's Office of Emergency Services, Mark Ghilarducci, said that Apple did a good thing by making new 911 options.
