The Role of Health Visitor in Health and Social Care

Section	Response
1. Research	The research process was conducted by first finding the keywords that were related to the responsibilities of the health visitor in the community health care. To determine which sources were most suitable for my needs, I applied the CRAAP test criteria.
2. Presenting	The video presentation was done for five minutes and included the holistic study of the Health Visitor Role. It includes the reasons behind the choice of the role, methodology of the research using search terms and source used, systematic study of sources using CRAAP test and problems encountered during the research with the writing of the report.
3. Challenges you faced with your presentation	There was very high speed of delivery in the presentation due to some factors including nervousness of the presenter and the difficult task of presenting such huge information within five minutes. There was no smooth flow from one part of the presentation to another since there was inadequate preparation done by the presenter. There was timing problem in some parts of the presentation which took longer than anticipated.
4. Actions to improve	For improvement of your presenting and researching skills: Record your presentation to assess your speed and fix errors. Practice the combination of all elements in your presentation until you feel confident about moving from one element to

	another. Conduct a practice presentation within time limits and analyze what elements should be modified due to time constraints. Practice speaking slowly and confidently to develop your self-confidence.
5. Further steps needed to Prepare for Task 3	To be able to complete Task 3, the following steps will be undertaken: conducting thorough research on three main Health Visitor competencies, evaluating them using the CRAAP model, developing practical scenarios with the help of the gathered data, and writing an official report.
