

Thinking About Space in the EBA Aegean

1. Either: Troy II

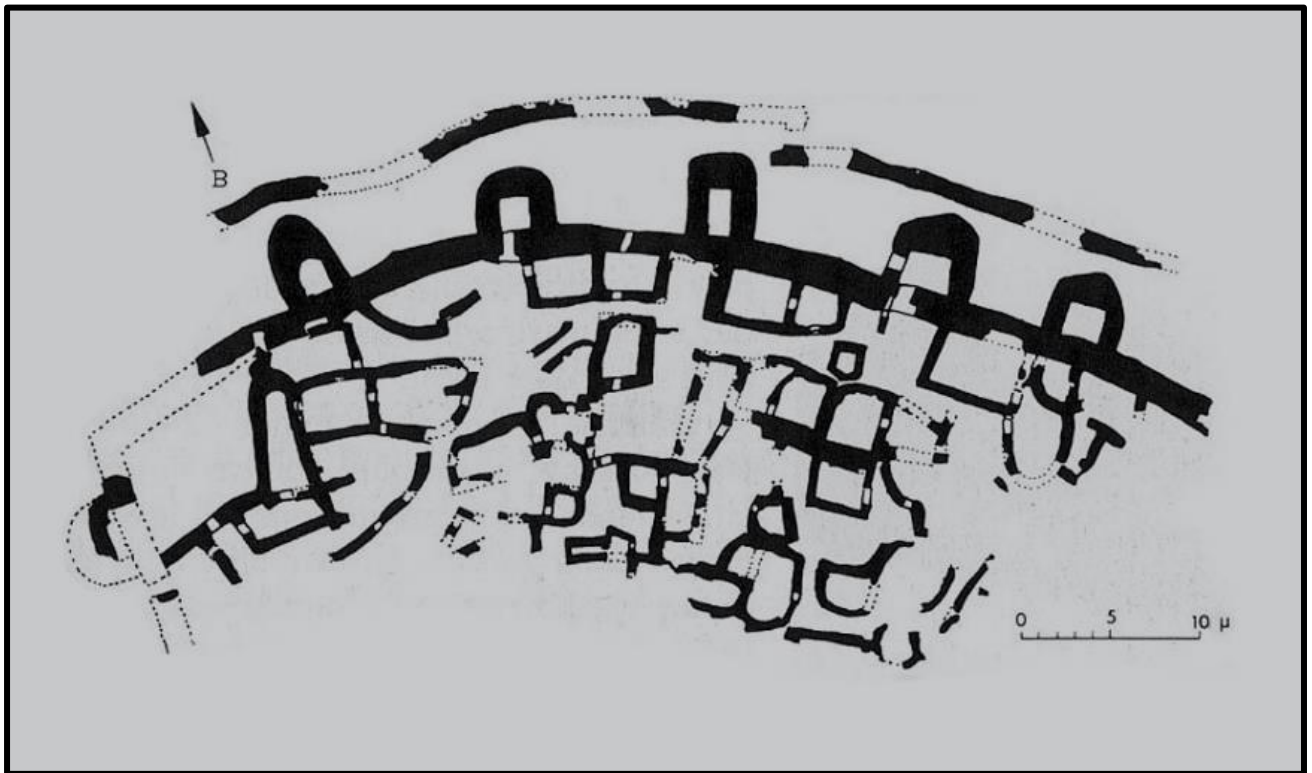

On this plan of Troy II identify and mark the key architectural elements:

- Gate FM (Scaean Gate)
- Gate FO
- Enclosed upper citadel
- Megaron unit IIA
- Propylon IIC
- Paved courtyard

What do these tell us about social organisation and daily life in Troy II? Try relating these characteristics with either Childe's 10 characteristics or urbanisation or Earle's criteria for chiefdoms. Are either of these useful models for interpreting EBA Troy?

2. Or: EBA Kastri

Describe the settlement at Kastri (Syros) which is located on top of a mountain. What are the key characteristics in terms of settlement layout, house size and composition (shape, number of rooms), boundaries of the settlement? Is there any evidence for central planning, organisation of labour etc? What might this tell us about daily life and social organisation in this Cycladic settlement? Try relating these characteristics with either Childe's 10 characteristics or urbanisation or Earle's criteria for chiefdoms. Are either of these useful models for interpreting EBA Cyclades?

(note that the B by the arrow indicates north in Greek).
