# Digital safety

## What is digital safety

Digital safety is protecting ourselves and others from cyber attacks , hacking and many other threats online.

## Why is digital safety important

Digital safety is extremely important because for example a hacker could get into your personal data including bank accounts and other personal data.

## How to stay safe

There are many ways in which you could stay safe online including downloading antivirus softwares , keeping privacy settings on , be very careful what you download , choose strong passwords and never share your passwords

## Hacking Statistics Reference

[Www.twenty-four.it](http://www.twenty-four.it)

So far in 2024 we have already had almost 8 million cyber attacks launched on uk businesses alone. Half of the businesses in the uk have reported a cyber attack and almost half a million cases of fraud and computer misuse has been reported.
