Introduction

Creativity in the work is very effective to overcome different challenging and threatening issues and attain the desired result. In an organisation, there have to perform so many activities for value creation and it can be possible to ensure the most effective way by developing the skills of creativity (Mazzucato, 2018). Health and social care providers need to serve people with different issues where they have to get an idea about the issue to produce a creative solution and the idea should be evaluated by mobilizing support. It is very effective to provide the best services and overcome any issue like discrimination. From the e-learning material of changemakers' "creativity and value creation" model, I have learned so many things that help me to develop my personal skills which are discussed in the report.

Reflective Learning

Key Learnings From The Module

By acquiring knowledge from my academic learning, I have developed skills that will be very effective for my career development. Every learner usually conducts their studies so that it can be possible to develop skills and successfully compete for academic education (Batalden et al., 2016). In the module there mentioned so much information that is relevant to the class topic and the students get the opportunity to shed light on their effectiveness.

From the course, I can learn how to make ideas with proper values. It is very important knowledge for everyone and I provided it a high priority after knowing its impact on everyone's day-to-day life. Every activity most of the time starts with ideas and it can be possible to make real value creation. I, before starting this course was not able to realize the importance and impact of ideas for performing. After starting the course, I found the topic in unit 1 where it was described with some real examples. The successful person started their activities with the ideas and they were able to create value after completing the tasks successfully (Edler and Yeow, 2016). When the ideas come to reality it increases the evaluation of an individual and increases their acceptance of others.

As I am working in a health and social care organization, I have to serve many people with different health issues. So, I badly feel how important the ideas are as they can create huge difficulties in people's life. As before I never evaluate anything before starting which created uncertainty and most of the time I was not able to bring the desired result. In my professional life, I also found that most public health leaders provide emergency services instantly which may provide relief at that time but it may create difficulty in the future. Effective ideas are considered as half of the work done and I can realize the issue. I was surprised by reading the unit and found that I have to develop so much knowledge so that I can develop my skills to create any idea about any topic which will be realistic. In the last stage of the topic, the teacher also discussed some recommendations so that we can develop our skills and don't get nervous. I also found how it is possible to develop the skills the innovation where it has an interconnection with the ideas. Innovation means bringing change in the products or services where the most important thinking is to meet the market demand or trend.

If an organisation produces a proper idea and brings innovation in the product or services is the most important thing to meet the market demand (Tidd and Bessant, 2020). In the health and social care profession, I want to attain a better position and try to develop skills so that I can make able to take on the responsibilities. So, I provided more focus on the topic of know-how innovation and ideas related to each other. I found that those are related to each other to ensure the best service for people with different health issues and solve their health issues in innovative ways. Creativity in the profession is also very important for producing the best solution in the public health sector. By delivering this skill I will be able to go one step ahead toward my destiny to work as a public health leader. The creative solution is one of the best strengths of leaders and the leaders who are able to produce the best solution instantly get the most acceptance from the people (Bourgois et al., 2017).

Impact Of The Attained Knowledge In My Profession

The creative solution in the public health sector is very important to remove different critical issues that were not experienced before (Matlin et al., 2018). Public health leaders need to face such kind of situations in many times when they need to make decisions with ideas. If they are able to bring creative solutions it can be possible to serve the best services to solve the issues immediately. To fix the solution the service providers need to mobilize support from the patients or other people who stay near the patient. It is very effective as a single type of health issue may express different types of symptoms where mobilizing support can be very supportive for that time to produce the most effective services that can reduce the risk of any harm. The ability to evaluate is also very important which I could learn from the module. I gathered so much relevant information so that I can develop my skills in evaluation.

The public health evaluation is a very common and important thing that helps the service providers to bring out the necessary evidence to produce the services to service properly. By evaluating all of the findings the service providers can decide to offer the services. The module was the basement for me to develop my skills in evaluation. I deeply focus on this topic to find out the most important point from the lesson as well as a different journal which I note down to use in my practical and professional life. The module helped me to develop the critical thinking ability that will provide me extra support to focus on any carer to bring out necessary evidence and realize the actual scenario in a short time. In the healthcare sector (Coon et al., 2020), critical thinking ability is very helpful to find out the necessary evidence for providing the best services. It will help me to make the best decision for the well-being of other people. I will also develop communication skills that will help me to collect the necessary information for proper evaluation.

To increase the connectivity with the carer I have to need to hear from them. I also have to influence them to share any issue without any hesitation and focus on the major issues. Effective communication skills will help me to bring their motivation, especially in the sector of mental health issues when people lose hope and don't show any interest to build a relationship with anybody. So this knowledge in the module was going very well. The course provides the information as a way that I can develop my skills and finally, I will get my best effectiveness to prepare ideas for any health issue. It will drive me to make the final decision. But before making the final decision at the time of server issues I have to observe so many issues which I have attained by developing my critical thinking skills, evaluation, and communication skills. I got the most satisfactory result by reflecting upon my knowledge after a certain time period so that I can find out the opportunity for development.

Sometimes I found that I could not able to remember any topic which I shared with the teachers and get their cordial support to overcome the issue easily. In the course, I have found some friends who were very serious about their studies and focused on every topic with great eagerness so that they can attain their expected results after completing the course. I have conducted a group study with them so that it can be possible to complete the study with more information. This was also very helpful for me to understand their feelings, behavior, and attitude. In the group study, I have to play the leadership role which helps to develop my quality of managing the team and supporting them by understanding their needs. It also impacts my professional life where I can make my team members more productive and able to increase engagement.

Action Plan For Skills Development

All of these helped me a lot and I can gradually go forward to reaching my destination. The course was very effective for me and I have attained so much knowledge from it. I also found some stages which should develop in the future by taking the necessary initiative which will be so effective. I was not able to make the decision with proper analysis which I can attain by acquiring the knowledge from the module. But I also wanted to develop my fast decision-making skills that are much needed for the eth leadership position in the public health sector. I am working on it so that I can make be able to make fast decisions to get a successful result. I try to develop these skills by acquiring knowledge from different relevant books and seeing different video content on the topic. I also go to my senior and try to follow him as he is the most successful leader in my present workplace to make the most effective decision at the earliest time. He is very amicable and always shows a positive attitude toward me. I focus on his activities so that I can realize what I have to need to develop and he also suggests to me in different cases.

He also keeps me beside him in different severe cases which is a very great opportunity to observe practically to widen my knowledge. I believe that my ability of effective communication, and creativity will help me to go forward and I will keep the learning process continuous so that I can make myself perfect in any situation. To service the people I have to acquire different types of knowledge and I think I will be able to cover all of them.

Conclusion

Health and social care service providers need to face various types of critical situations every day where the ability to effective ideas is very effective to produce the best solution for the patient. In the time of any critical situation, any wrong decision can bring the risk of losing someone's life and the service providers always keep it in the mind. As public health leaders have to work under pressure and need to bring out the best solution the leaders should be very innovative and creative to release the pressure and produce the best solution to solve the issues. I am preparing myself for the leading position and this module help me to develop my knowledge of different sectors. I am also preparing an action plan to develop and practice the acquired knowledge in my personal and professional life so that I can attain the necessary knowledge properly.
