GRADEMARK REPORT

FINAL GRADE

63/100

GENERAL COMMENTS

Thanks for this Joe, some good work on show here.

Overall a good presentation, with in depth reflection given and a view to future work considerations explained.

3D Work on show is competent with usage of some advanced tools detailed (Bridge, Quad draw etc.) - although I feel that some models may have had more attention than others. I would liked to have perhaps seen some more extrusions/detailing on the dumpster model - this could have been assisted by using more photographic references while modelling.

The house model also contains many edge loops that aren't relevant to the structure of the object. In future, imagine edges you add to the model as a limited currency - always to try save them to have as low a polycount/edge count as is necessary for the structure of the model to be possible.

Models show good edge flow and topology understanding with great promise for future studies.

Presentation was delivered confidently with an intro and bibliography page with all information conveyed in a clear manner. Well done.
