Lamborghini

Di Cento

Lamborghini is known for creating some of the most exotic and unique cars in the world. For this project, I wanted to design the next generation of Lamborghini Supercars. My design aims to replace the current generation Lamborghini Huracan. My inspiration came from blades, neon lights, futuristic city concepts and current generation Lamborghini cars as I wanted the design to be very aggressive.

Lamborghini's first factory was built in Pieve Di Cento.

Thus, I decided to name my design after it.
