

My Garden

My special place..

When we first moved to the house we were set on cutting down the trees and trimming away all of the hedges, as you can see we decided to keep these to conserve the environment for the many animals that it is home to.

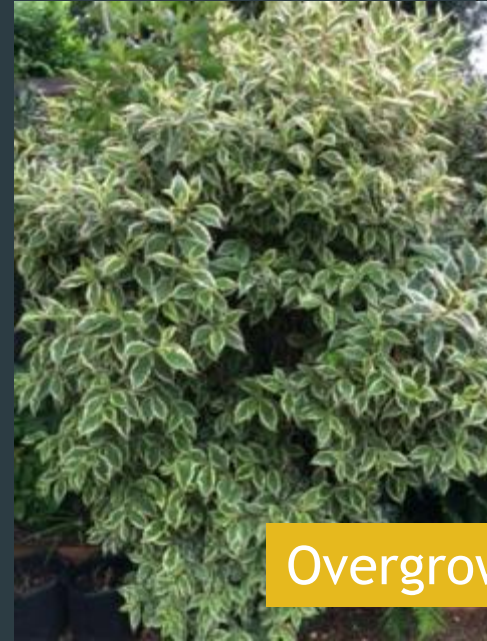

We try to keep the hedges wild, so that there is less disturbance for the wildlife. As you can see there are lots of nooks and cranny's that they can hide in.

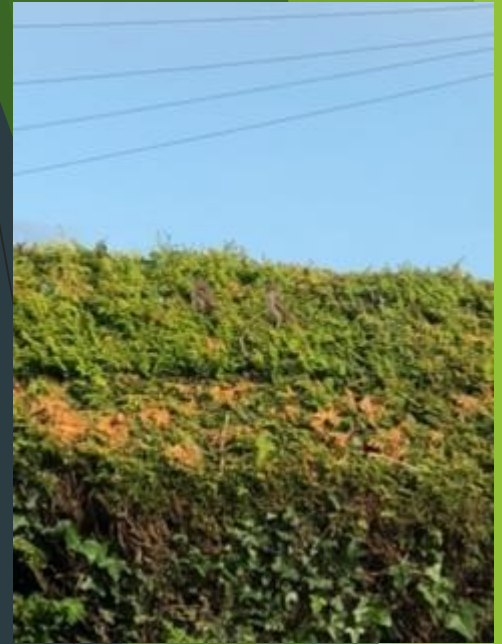

Birds - we have conserved lots of areas for the birds to play, and nest away from the prying cats. We attract all lot of birds.

NESTS

Overgrown hedges

This bird was found on the back of our van

Raspberries and blueberries that the birds enjoy

A well used birdbath

Birds

Plenty of food supplied by us and from natural resources

Hedgehogs

We opened the thoroughfare that we initially blocked up.

Press play

Press play

This little one was in the garden then ran out onto the road. He was very hungry and scared.

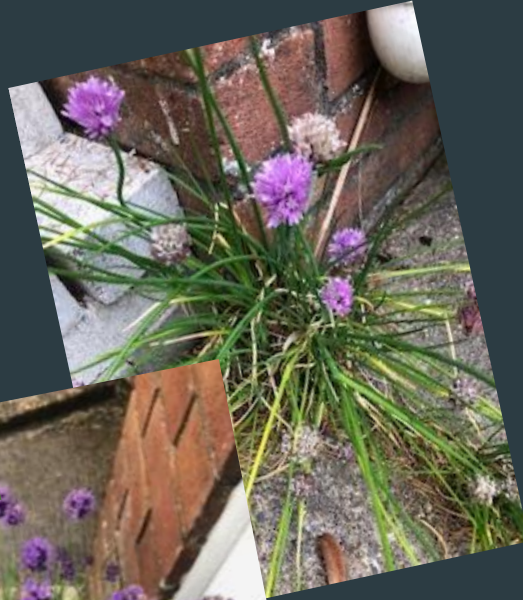

Bees

We see a lot of bees in the garden and provide lots of flowers and water for them to succeed in their participation of pollination.

We keep our holly tree wild as the Bumble Bees use it to rest and for safety.

The squirrels

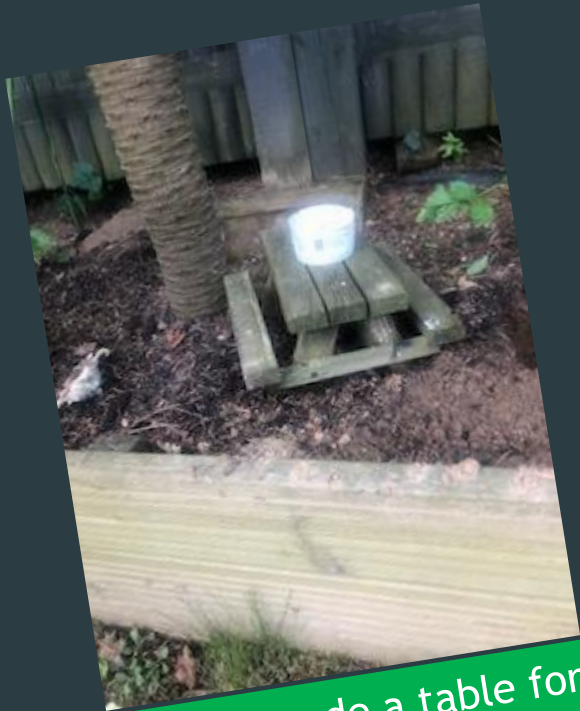

These are cute to watch
however, can be quite
troublesome.

Please click on the link above
to see the squirrels at work.

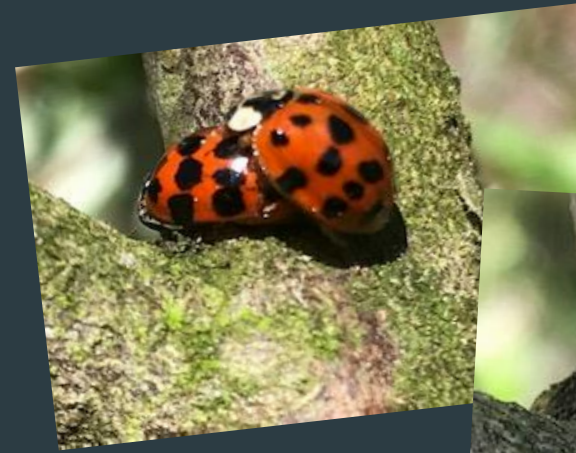

My son made a table for
them, it didn't last long as
they damaged it

The trees are perfect
for busy squirrels,
they love to run up
and down them for
hours.

The pond

The pond has a large willow tree growing from it and is surrounded by reeds. This is perfect for wildlife to thrive.

The willow tree provides homes for many mini-beasts

In these pictures you will a newt and some very small frogs circled

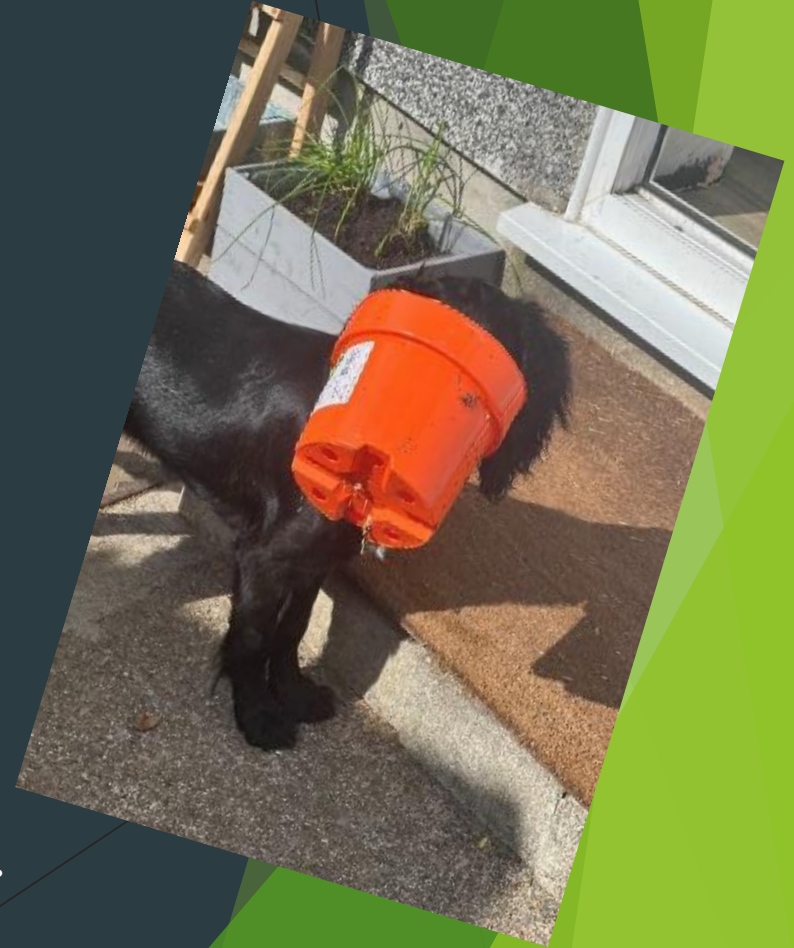

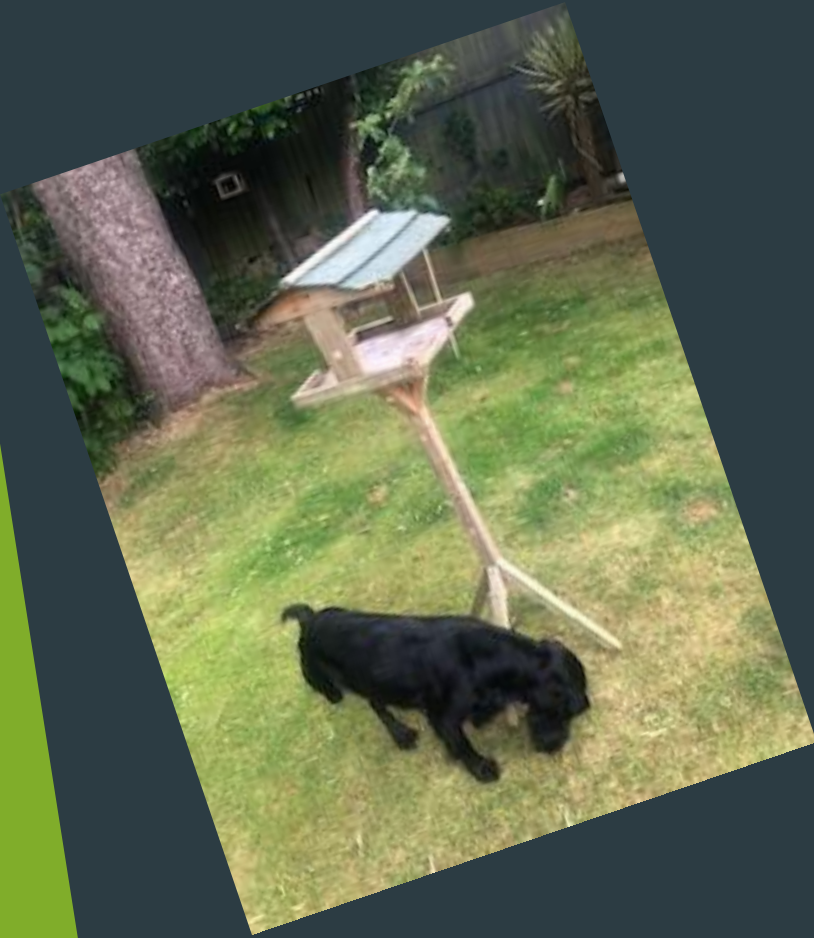

Fungi grows in abundance throughout the year

Slow worms

a family of
slow worms
that had
nested in a
rotting tree
trunk the
base of an
old tree.

Even Cooper the dog helps with the conservation

Thank you for sharing my passion with me.
