

DIGITAL SAFETY

PROTECT PERSONAL INFORMATION

Keep all of your personal data safe using strong passwords with different characters and numbers. Make sure to not share any passwords with anyone, you may even face a lot of apps now on some mobile devices

UPDATING APPS

Make sure you are updating your apps or softwares to prevent any viruses or other kinds of malwares which may be able to hack into your device and use your personal information

SECURE INTERNET

You must ensure that you are using secure internet as this protects your network from any unauthorized users or hackers, using VPN also is very useful as it could also shield your activity from hackers

HARMFUL CONTENT

Be aware of all things you post online as you may get potential scammers or people who would want to use your personal pictures on there platform. To avoid this make sure you have your social media platforms on private, don't accept accounts you may not know or seem fake

PUBLIC DEVICES

If you use any public device, for example a computer at an internet cafe and you were using your emails or any social media platform make sure you log out once you're done so you know no-one will be able to look through your personal information

EDUCATING CHILDREN

Educating children about digital safety is very important as they may be unsure of what they can post online and if that may cause them any harm as most kids nowadays have access to mobile phones
