

# Online Safety

Always stay secure online for example, when you go into a site or you open any link, be cautious and think before you add any personal information, because there are a lot of dangerous things that can happen. The most important is always be careful, for example you can take an example as you do on everyday, When you want to have a secure house/home, you look the door, When you want to avoid someone's taking your bike you use a bike locker, When you have valuables you want to keep them safe, so you you keep them somewhere very safe. And it's the same with online, always be safe

## Passwords/Security

Protect your device:

- Keep your devices always secured
- Always use strong passwords
- After some time update your passwords
- Keep your personal information private, so the others online can't see your personal informatio, like email/phone numbe or any other personal data

## Basic Digital Safety

Basic Digital Safety is all about staying safe online for example, it can help you stay secure from hackers and feeling safe stsyng online

## Privacy

You need to always be sure your settings are are private so there is a option to set who can see your account. Also you don't give out any personal information, for example be always cautious with the personal information. There is also the thing that you don't discuss your problems online, so no one knows about your issues just you. If you are thinking that your account its been hacked by someonegive report and change it

## Remember

- Never reply to people who is making bad comments and make you feel uncomfortable
- Don't be scared to block or remove anyone as friend from your list
- Instead of responding to anyone making unkind comments, just give them a report, it helps you and others also

**Be Safe! Be Sure! Be Smart!**
