# INTRODUCTION

In This Presentation We will talk about the unfortunate disappearance of Dr Danna Heart

Dr Danna Heart was aged 42 her job at NovaTech was Senior AI and robotics Engineer. Her height was 5.7 and her eye colour is Green and she is wearing a silver necklace with “Innovate with purpose” engraved in it. Last seen Leaving her lab January 5<sup>th</sup> 2025 around 9:30PM. One of the reasons she was known for was Pioneering work in advanced robotics and AI integration. Now let us explore into the understanding of evidence and theories that would help us in the understanding of this rather interesting case.

# Key Evidence

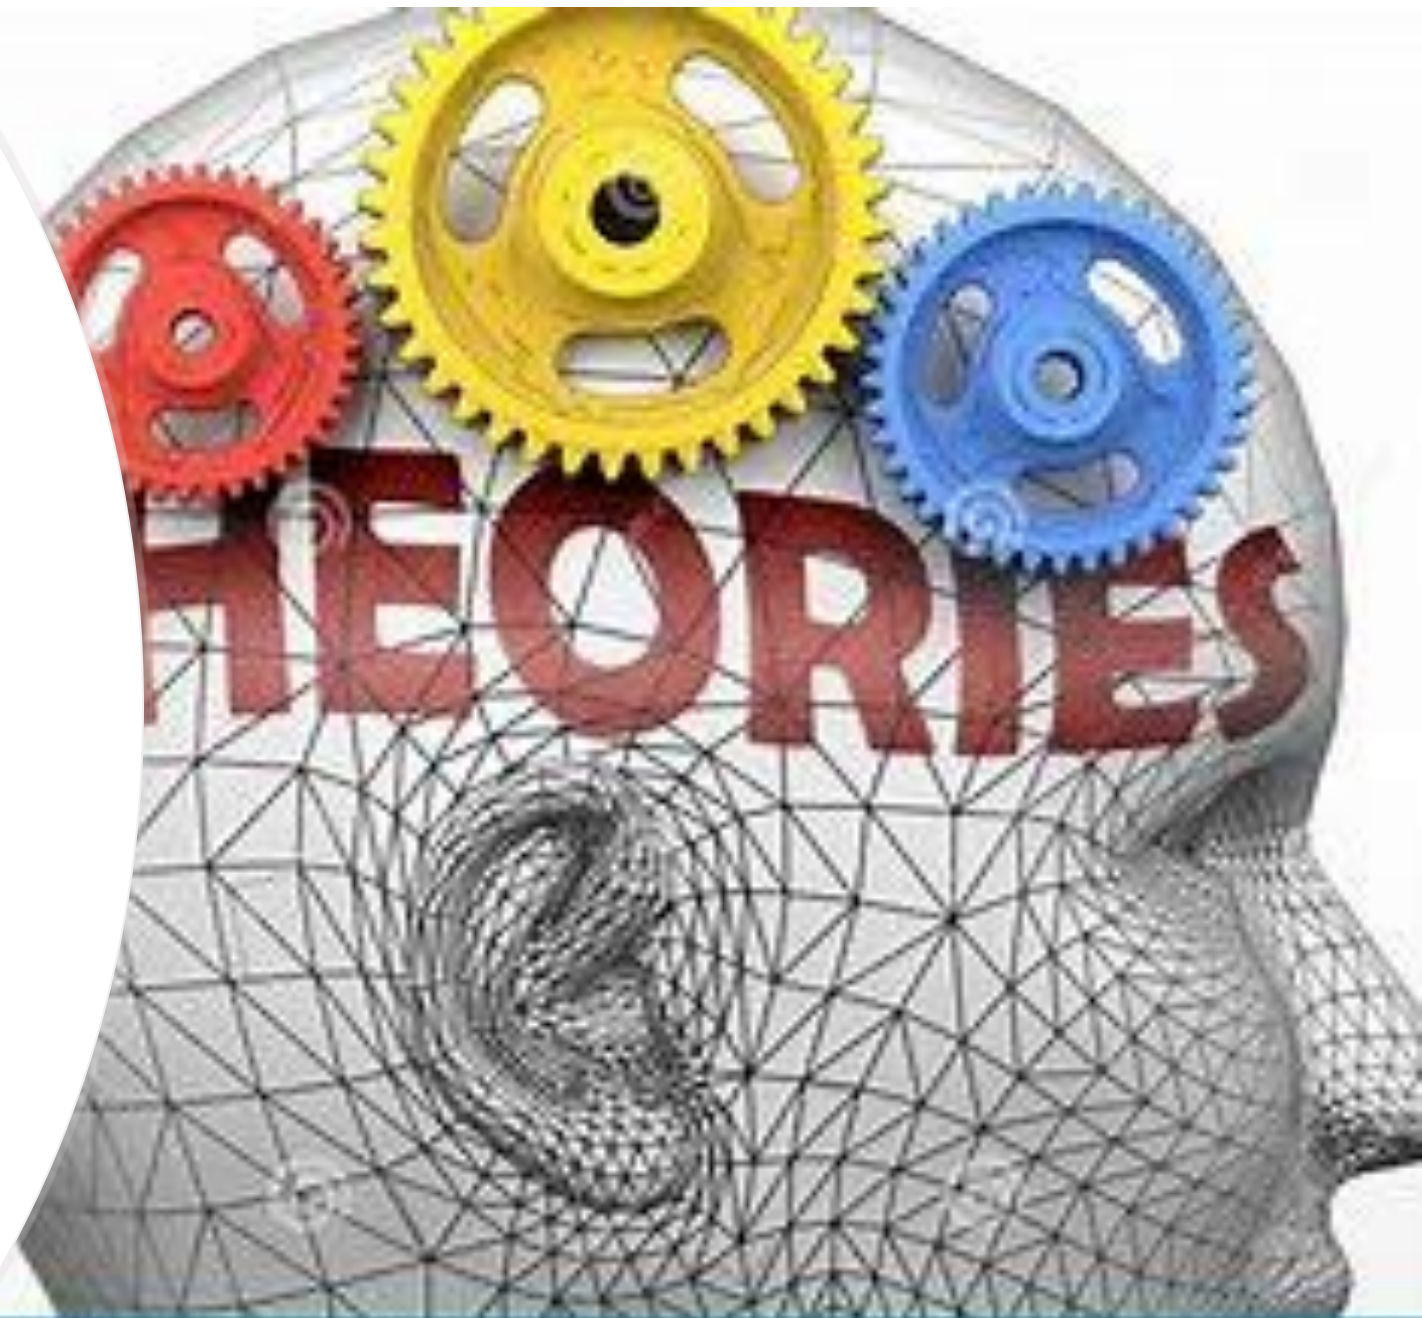

The above investigation showed several strong evidence as follows :Dr Harts Neighbor(Cynthia Ramirez) explains she witnessed a odd looking suv outside Dr Harts home the night before she disappeared.

Dr Harts Rival Researcher(Dr. fox Alaric) rumored to have disagreed with her over AI ethics.

Lab Assistant(Peter Singh) says Dr Hart was worried about a meeting with company executives.

# Conclusions and Theorises

- I thought about 3 possible things that could of happened
- 1.She might have been kidnapped because there was a strange suv parked outside her house.
- 2.Dr. Fox Alaric might have disagreed with her and he could have been violent.
- Company executives might of done something because why was Dr Hart this worried about a meeting and her office was trashed too meaning she might have been in a hurry and was finding for something. Like she was being forced to do something she didn't want to or she was under pressure.
- Both theories explicate the importance of ethical issues and rivalry in AI business>

# reflection

# REFLECTION

- While writing this the challenges I faced were: Getting enough evidence, Summarising my theories and making sure everything makes sense.
- But all of this has been a good learning process too.
- During this piece of investigation I learned how important it is to keep scientists safe especially if their doing big research and a lot of people want to get their hands on. It is also important to stop take a deep breathe and evaluate the situation and think if your doing right or wrong.
