

Augmented Reality exhibit: A search for history.

This AR app would run on visitors mobile phones and allow them to scan each exhibit in the museum, checking their progress as they go. Additional facts and a zoomable, interactive digital version of each exhibit will be available. On ~~the~~ scanning all of the exhibits, each the user will be able to claim a free badge ~~with~~ with the museum logo, further promoting the museum. Each fact should be ~~made~~ read through audio, using the hearing human factor and being accessible to the visually impaired.

Rough sketch:

Users will only need a tablet or mobile device to use the AR app with a camera. Additional hardware is not required. The user will only need to download the app ~~for~~ from an app store, additional ^{software} hardware is not required.
