

Tech & Companies are investigating, improvements and releasing more and more products that support the technologies. In conclusion, Virtual Reality is a fully immersive experience where a user leaves the real world environment behind to enter a fully digital environment via VR headsets. Augmented reality is an experience where virtual objects are in ~~the~~ the real-world environment via smartphones, tablets, head s-up ~~dis~~ displays or AR glasses. For my exhibit ~~des~~ designs, there would be VR Reality world which would be suitable for the application. Users that have the app and VR glasses could use this and ~~the~~ on the app. There would be different features, such as seeing the different animals in front of them. Just like ~~at~~ a virtual world. For AR, user could use their device just like Pokemon Go, where different animals and sculptures would appear on their mobile device. This AR use the mobile phone, as well as their camera for them to see. ✓
