INTRODUCTUION

From the first page probably you are asking why this picture of the old couple?! At the appendix you will read the story of this tho, but something shortly to introdust you too cace. Let me called them **Mr & Mrs T**, they just passed the worse days at they life and now they are looking for help. And the help that they are looking for are very important for the family to continues the regular life that they have before Mrs T medical condition. As they are very old and do not use internet the only thing that closed they mind was Social Services.

Not the part with the help. At the end of my coursework this family will know everything of how the system is working. More about analyses and evaluates the principles of support, policy and practice and at the end I as a care worker helping this type of people every day I will give own recommendations of something that I would love to add fro the **policy** and **practice**.

SOCIAL SERVICES

The chosen organisation of **Mr & Mrs T** is the largest organisation providing Health and Social Care and that's Social Services.

First thing that we all have to know is what services are available at England and Wales only:

- Home care (cleaning, personal care, shopping).
- Equipment for this care frame and possible elevator to the second floor of the house.
- Person who will help you to adaptation after treatment at medical organisation.
- Day centres such as: Leisure Centre
- Care Homes (GOV.UK, 2022)

A health and social care assessment is controlled by social services to find out what help and support you need - like healthcare, equipment, help in your home or residential care. You just need to say your post code or online and they will connect you to the right departments after the assessment is done and the help that are needed are complete. (GOV.UK, 2022)

The assessment are created by policy to protect children and adults. To integrate people into communities to improve their independence. Also I would like to mention that this organisation are working on control as it's not part of our case study I won't go deep in this conversation. (Social care institute of excellence, 2007)

What social services can also do is to guide communicating with different institution. In our case this organisation will be: Age Concern, NHS, local Council , Care Homes, Care Organisation and n.t.

CARE HOME

Mr. T have progressive dementia, Mrs.T just came out of the hospital.

There is no cure for dementia, it can only get worse. The mental and the physical way of leaving will only go on direction down. Plus that Mrs T just had surgery. That is why most of the care organisations will offer to move this family into a care home.

One example of the organisation that I chose to use in my report is saying that. Have many numbers of reasons why this family can move they life in Cara Home.

- Hospital admissions
- 24 hour care services provided
- Community
- Cooking to washing (Care Home, 2022)

As a care worker going house to and visit this customer users 4 times a day as some of them are in bed and they can not even walk a single step. In this cace study I believe that the Care Home is the last best option for this old people. To be move from their house that they lived more that probably 50 years. The stress of this can lead to worse and bad ending. You can see my recommendation later in my report.

HEALTH AND SOCIAL CARE ACT 2008

This Act is made to establish, to help with supplies in connection with Care Quality Commission. This Act is to provide provisions to institutions such as: Social Care, Health Care, National Health Service. Also help the Mental Health Act (1983) do their investigations. To help for the connection between Office and Health Professions.

“ To provide powers to change the regulation of social workers; amendment of the Public Health (Disease Control) Act 1984; to ensure the payment of grants to women in connection with pregnancy; to change the functions of the Health Protection Agency; and for related purposes. “ (Health and Social Care Act 2008, 2008)

The Care Act 2008 are leading as to (regulated activities) happened with the Regulations 2014.

The Secretary of the State made the regulations to support Health and Social Care Act 2008.

Regulated activities:

- Requirements where the service provider is an individual or partnership
- Fit and proper persons: directors
- Requirement where the service provider is a body other than a partnership
- Requirements relating to registered managers

Fundamental Standards

- General

- 9 Person-centred care
- 10 Dignity and respect
- 11 Need for consent
- 12 Safe care and treatment
- 13 Safeguarding service users from abuse and improper treatment. (UK Parliament SIs, 2014)

CARE ACT 2014

The Care Act 2014 is the law, of how the social care in England would be present to the adults. The Act is made sure that the people will received the service that prevent their well being , provide care support, n.t.

- Empowerment.
- Protection.
- Prevention.
- Proportionality.
- Partnership.
- Accountability.

However during the big changes that happened to all humans all over the world pandemic (COVID-19). Had changes with the Care Act 2014. This changes happened on March 2020 they called it easements. The changes where made to try reducing the duty of local authorities. (Care Quality Commission, 2022)

THE MENTAL CAPACITY ACT

Shortly (MCA) is create to protect people who my not have the luck of having mental capacity. This can be:

- dementia
- a severe learning disability
- a brain injury
- a mental health illness
- a stroke
- unconsciousness caused by an anaesthetic or sudden accident

However, if person have some of this conditions dose not mean that the person can not take his own decision. (NHS, 2022)

Let me give you and example of the cace that I work on it. Mr.T have progressive dementia, but till this day he where able to leave without 24 house help for his needs. So he is having some capacity to choose for example what to eat when his wife where asking or if it want cup of tea.

Example of my work:

I look after 93 years old lady she have progressive dementia, she dose not even remember me at all for her I am new person every time that she had care to help her. However this lady can chose what she want to eat or drink, but nothing else.

That is why this Act is very important as the people with problem with the mental capacity need to be understand and have low specially for this vulnerable people.

WHO DEMENTIA

Dementia is a syndrome, usually with progressive nature. That lead to determination some of the functions of the brain. Effects memory, thinking, orientation, comprehension, calculation, learning capacity, language, and judgement. It effect the cognitive functions so it can effect also the human mood, emotional control, behaviour, or motivation of usual daily routines.

In our cace Mr. T are having last stage of dementia. This is the last stage of the syndrome. That mean total needing of help, the memory is serious disturbed.

- becoming unaware of the time and place
- having difficulty recognising relatives and friends
- having an increasing need for assisted self-care
- having difficulty walking
- experiencing behaviour changes that may escalate and include aggression. (WHO, 2021)

RECOMENDATION

During my research the the writing process. First I will give my opinion as Care who work with people like this all the time, secondly I will give opinion as professional who need to help this family to continuing leaving they life.

As I Care I face different type of illnesses and syndromes and this people are leaving their homes as they are still having the capacity of choosing how to leave they lives or some-part of the family is on charge and dose not want the member to leave the home and the memories that this person have.

However, Mr. & Mrs T from the information that have been given to me. They need urgent help us the condition of both of the are not good at all. When they contact the Social Services, the help will be on they way. Many offers will be give to them once the assessment is over, my recommendation the family is to move to a Care home at the help and the support will no been questioned from them. Yes at the begging will be hard to adapt at the new place , but this help will be provided as well. I know is hard to say you need to move or sale your house so you can have apartment at a Care Home with all the benefits that this place provide. The family can choose whats best for their well being life.

Before the knowledge that I got during my research I have had changed my ming of what is the best at this cace study.

The person who will go to do the assessment should be prepared no for answer.

CONCLUSION

This report made me think very long time from where to start and what I can do to help this old people. One with surgery the other with the worse last stage of dementia. I chose few acts that I think that will help at this situation or might not. Also some regulation regarding their health condition. To this people will definitely offered help and they will continue leaving their life together.

DEMENTIA HOME CARE UK

Key learning points

- Finding the right care home for someone is very important; it must meet their individual needs
- Observing care workers interact with people in a care home will provide an insight into how the care home meets individual needs
- We all need to acknowledge the reality of the person with dementia and not force them to join our reality
- Care homes should work in partnership with family members, allowing them to provide the support they wish to give their loved ones

Living in a care home: A positive outcome for a person with dementia
