Stay safe online

Personal Information	Passwords	Education	Security softwares
Personal Information are our names, where we live, our date of birth, our pictures. Limiting personal information on social media can help to don't have an easy access and get your data stolen. Limit your privacy settings Be Cautious when using public Wifi and on what you share. Hackers might found an easy access to your device Be aware when pop up pages comes up and ask you for your personal information. We Should try to keep personal information private which means to share it only with few, known people. BITESIZE (2024)	Create Strong passwords using a mix of: uppercase, lowercase letters, numbers, symbols and make your password difficult and not intuitive to guess Change your passwords regularly and do not write them down your passwords and make it easy to copy and access it. Enable two factors authentication adds an extra layer of security to your logins. You should always keep your passwords private and ideally never share it even to friends. They might pass your password to someone else and make you not able to access your app or program. In the website: Manage engine, Zoho Corporation LTd. (2024) you can download a software to help you manage your passwords and keep it protected. This is mostly used by big businesses in order to keep details safe using a wide range of tools like: change password periodically, create time limited accesses.	Education and keep learn about how you can protect yourself online it is essential. The more skills and knowledge you have about what can protect you the most you will be Get Safe online (2024) it is one useful website to get skills and knowledge on this topic. As per everything Knowledge it is power, it will help you understand the unsecure areas and keep your eyes open to any potential online hazard. On the website: How to stay safe online: social media and personal details (2024) there are some examples on how to be safe online. Nowdays you can access third party websites with your facebook data, but always be aware if you would trust these websites with your facebook details.	These suites typically include antivirus, anti-malware, firewall, and sometimes VPN services to protect your online activities. It's important to choose a security suite that fits your specific needs and usage patterns. Be sure to consider factors like the number of devices you need to protect, the level of security you require, and any additional features that may be beneficial to you. Always keep your security software updated to ensure the best protection against the latest threats. On the website Antivirusguide (2024) there is a list of the best antivirus software's. All those software's are compared in price and tools in order to help you understand what would work better for your use. There are even free antivirus, one of the most downloaded and also simple to use is AVG. AVG(2024)
